ar 623 3 pdf: Derecho al cannabis Armando Ríos Piter, 2019-06-06 El cannabis es la droga ilegal más consumida en el mundo. A pesar de los diversos usos industriales, científicos y medicinales de la planta, su condición psicotrópica la ha mantenido en el centro de las políticas prohibicionistas en muchos países del mundo. Este enfoque, sin embargo, es materia de polémicas cada vez más encendidas. Por un lado, se reconoce cada vez más que la ilegalidad fomenta los mercados negros y los delitos asociados al tráfico. Por otra parte, los argumentos jurídicos más recientes han concluido que proscribir el consumo recreativo de la marihuana atenta contra el derecho al libre desarrollo de la personalidad. A partir de su trabajo como legislador y su relación con las comunidades rurales del sur de México, Armando Ríos Piter ha defendido la necesidad de construir una nueva política de drogas. En este libro presenta un sólido resumen de la situación en torno al cannabis, los retos y oportunidades de la legalización, y su propia experiencia al haber obtenido uno de los amparos ante la Suprema Corte de Justicia de la Nación para el uso lúdico de la marihuana. Consciente de que se trata de un asunto de vital importancia no sólo para el país, sino para América del Norte, para la región latinoamericana y para el comercio global, *Derecho al cannabis* es a la vez una explicación clara del debate en torno a la legalización y un alegato por una regulación no prohibicionista para México y el mundo.

ar 623 3 pdf: The Marsh Builders Sharon Levy, 2018-05-17 Swamps and marshes once covered vast stretches of the North American landscape. The destruction of these habitats, long seen as wastelands that harbored deadly disease, accelerated in the twentieth century. Today, the majority of the original wetlands in the US have vanished, transformed into farm fields or buried under city streets. In *The Marsh Builders*, Sharon Levy delves into the intertwined histories of wetlands loss and water pollution. The book's springboard is the tale of a years-long citizen uprising in Humboldt County, California, which led to the creation of one of the first U.S. wetlands designed to treat city sewage. The book explores the global roots of this local story: the cholera epidemics that plagued nineteenth-century Europe; the researchers who invented modern sewage treatment after stumbling across the insight that microbes break down pollutants in water; the discovery that wetlands act as efficient filters for the pollutants unleashed by modern humanity. More than forty years after the passage of the Clean Water Act launched a nation-wide effort to rescue lakes, rivers and estuaries fouled with human and industrial waste, the need for revived wetlands is more urgent than ever. Waters from Lake Erie and Chesapeake Bay to China's Lake Taihu are tainted with an overload of nutrients carried in runoff from farms and cities, creating underwater dead zones and triggering algal blooms that release toxins into drinking water sources used by millions of people. As the planet warms, scientists are beginning to design wetlands that can shield coastal cities from rising seas. Revived wetlands hold great promise for healing the world's waters.

ar 623 3 pdf: WHO Expert Committee on Drug Dependence World Health Organization, 2024-04-19 The Forty-sixth Meeting of the World Health Organisation (WHO)'s Expert Committee on Drug Dependence (ECDD) was convened from 16 to 19 October 2023 and was coordinated from the WHO headquarters in Geneva. The Forty-sixth WHO ECDD critically reviewed six new psychoactive substances: including two benzodiazepines (bromazolam, flubromazepam), one novel synthetic opioid (butonitazene), two cathinones/stimulants (3-CMC, dipentylone) and one dissociative-type substance (2-fluorodeschloroketamine). A critical review to consider international scheduling measures was undertaken for each substance so that the Expert Committee could consider whether information about these substances may justify the scheduling or a change in scheduling of a substance in the 1961 or 1971 Conventions. In addition, the Forty-sixth ECDD carried out a pre-review of nitrous oxide and carisoprodol to consider whether current information justified a critical review. This report summarizes the findings of the forty-sixth ECDD meeting.

ar 623 3 pdf: A Theory of Legal Punishment Matthew Altman, 2021-05-05 This book argues for a mixed theory of legal punishment that treats both crime reduction and retribution as important aims of the state. A central question in the philosophy of law is why the state's punishment of its own citizens is justified. Traditionally, two theories of punishment have dominated the field: consequentialism and retributivism. According to consequentialism, punishment is justified when it maximizes positive outcomes. According to retributivism, criminals should be punished because they deserve it. This book recognizes the strength of both positions. According to the two-tiered model, the institution of punishment and statutory penalties, as set by the legislature, are justified based on their costs and benefits, in terms of deterrence and rehabilitation. The law exists to preserve the public order. Criminal courts, by contrast, determine who is punished and how much based on what offenders deserve. The courts express the community's collective sense of resentment at being wronged. This book supports the two-tiered model by showing that it accords with our moral intuitions, commonly held (compatibilist) theories of freedom, and assumptions about how the extent of our knowledge affects our obligations. It engages classic and contemporary work in the philosophy of law and explains the theory's advantages over competing approaches from retributivists and other mixed theorists. The book also defends consequentialism against a longstanding objection that the social sciences give us little guidance regarding which policies to adopt. Drawing on recent criminological research, the two-tiered model can help us to address some of our most pressing social issues, including the death penalty, drug policy, and mass incarceration. This book will be of interest to philosophers, legal scholars, policymakers, and social scientists, especially criminologists, economists, and political scientists.

Al-Shaikh, Ameenah Gurib-Fakim, Mirza Barjees Baig, Mohammed Bahir, 2024-02-28 This contributed book, as a part of a series of CERES publications, provides a multi-regional and cross-sectoral analysis of the interlinkages, challenges, and emerging responses in the areas of water security, climate change, and food systems, especially in a context marked by severe implications of the COVID-19 pandemic, increased climate vulnerability of many regions already water stressed, and an ambitious global action aiming at curbing climate change and restoring ecosystem. In the first set of chapters, the water, food, and environmental/climate security nexus is explored theoretically and by reference to empirical research covering many regions and sectors. In another set of chapters, the impacts of climate change on water resources and water-stressed regions are identified along with their implications for food systems and security. Other chapters of the volume identify the emerging solutions to the nexus challenges, mainly adaptation and mitigation options, governance and management approaches, technological and economic solutions, innovative farming and water management practices, etc. Most chapters scheduled for publication address timely and future-oriented topics, are based on empirical research particularly done in water-constrained and climate vulnerable countries from Asia, Africa, and the MENA region, and provide policy-oriented inputs and recommendations to guide change processes at multiple scales.

ar 623 3 pdf: *World report on the health of refugees and migrants* , 2022-07-20 Worldwide, more people are on the move now than ever before, yet many refugees and migrants face poorer health outcomes than the host populations. Addressing their health needs is, therefore, a global health priority and integral to the principle of the right to health for all. The key is to strengthen and maintain health systems by ensuring that they are refugee- and migrant-sensitive and inclusive. Health outcomes are influenced by a whole host of determinants. However, refugees and migrants face additional determinants such as precarious legal status; discrimination; social, cultural, linguistic, administrative and financial barriers; lack of information about health entitlements; low health literacy; and fear of detention and deportation. This groundbreaking publication outlines current and future opportunities and challenges and provides several strategies to improve the health and well-being of refugees and migrants. It is an advocacy tool for national and international policy-makers involved in health and migration. Evidence on the health of refugees and migrants remains fragmented - comparable data across countries and over time are urgently needed to track progress towards the health-related United Nations Sustainable Development Goals. With only 8 years until the 2030 target date to transform our world, the time to act is now.

ar 623 3 pdf: The Blue Economy Somnath Hazra, Anindya Bhukta, 2022-10-13 This volume defines and analyzes the Blue Economy, a system that encompasses all the economic activities which are happening in and around the ocean within a sustainable development framework, with focus on countries in Asia. This work is timely, as Blue Economy activities account for a significant share of GDPs in the island and coastal economies in the Asia region, sustaining the livelihoods of one of the largest sections of the world's population. This book, therefore, assesses how the Blue Economy contributes to these livelihoods from economic and ecological perspectives and analyzes the various types of ecosystem services provided, and how these services are regulated and maintained. While most studies of the Blue Economy focus only on the economic aspects, this book provides ample statistical data to demonstrate why ecosystem services should additionally be considered for the estimation and valuation of the Blue economy. The book is primarily meant for researchers, students, and teachers in the fields of environmental and ocean economics, sustainable development, and ecosystem services, and will be of further interest to policymakers and government officials working in matters related to the Blue Economy and sustainability policy.

ar 623 3 pdf: Specialty Crops for Climate Change Adaptation Chandrasekar Vuppalapati, 2023-10-14 Specialty crops are defined as fruits and vegetables, tree nuts, dried fruits, horticulture, and nursery crops including floriculture. The value of specialty crop production in the United States accounted for 18.44 % of the \$433.569 billion in agriculture cash receipts collected in 2021. In 2020, that ratio was 21.47% of the \$363.464 billion. Specialty crops are gaining increasing attention across nation as demonstrated in the 2018 farm bill (Agricultural Act of the 2018 Farm Bill (P.L. 115-334)) with the increased number of provisions addressing specialty crop issues, reflecting their growing role in the global economy. The cultivation of Specialty crops, nevertheless, has its own challenges. Specialty crops are generally more sensitive to climatic stressors and require more comprehensive management compared to traditional row crops. Specialty crops face significant financial risks threatening US\$1.6 Trillion global market due to their higher water demand. The mission of the book is to prepare current and future software engineering teams, agriculture students, economists, macroeconomists with the skills and tools to fully utilize advanced data science, artificial intelligence, climate patterns, and economic models to develop software capabilities that help to achieve Specialty crops and economic sustainability, through improved productivity for years to come and ensure enough food for the future of the planet and generations to come!

ar 623 3 pdf: Challenges of Pharmacoeconomics in Global Health Arena Mihajlo (Michael) Jakovljevic, Nick Verhaeghe, Kyriakos Souliotis, 2019-03-01 The pace of globalization has significantly accelerated since the end of the Cold War Era in 1989. These changes profoundly affected health care systems worldwide. Health policy makers increasingly started facing new harsh challenges in their uneasy task to provide universal health coverage and decent equity of access to medical services. Among the most prominent demand-side issues are extended longevity joined with population aging, rise of non-communicable diseases, and growing patient expectations. Supply-side causes are gains in societal welfare and living standards, technological innovation in medicine and continuing rapid urbanization in developing world regions. Successful insurance-based risk sharing

agreements made drug dispensing and medical service provision cheap or virtually free at the point of consumption in most OECD and many middle-income countries. Coupled with massive build-up of workforce capacities and strengthening of primary care and hospital networks, all these factors contributed to the “supplier induced demand” phenomenon. There is straightforward historical evidence of long-term growth in pharmaceutical and overall health spending both in absolute and GDP% terms worldwide. The accumulated constraints deriving from skyrocketing costs of care were felt in many areas of clinical medicine even among the richest societies. Cardinal examples of expensive and hardly affordable therapeutic areas are orphan drugs indicated to treat rare diseases and targeted biologicals used in autoimmune disorders and cancer. Last but not least, is troubled and frequently denied access to even essential generic pharmaceuticals still taking place in many nations. This appears to be particularly the case among the world's poor and under-served citizens residing in rural and suburban areas of low- and middle-income countries. To a large extent, these difficulties are worsened by lack of evidence-based resource allocation strategies and less sustainable financing strategies.
