orbit timer manual pdf: Building a Dedicated GSM GPS Module Tracking System for Fleet Management Franjieh El Khoury, Antoine Zgheib, 2018-01-31 This book shows how to build a INFelecPHY GPS Unit (IEP-GPS) tracking system for fleet management that is based on 3G and GPRS modules. This model should provide reliability since it deals with several protocols: 1) HTTP and HTTPS to navigate, download and upload in real time the information to a web server, 2) FTTP and FTTPS to handle in a non-real time the files to the web application, and 3) SMTP and POP3 to send and receive email directly from the unit in case of any alert. Similar to a mobile device, but without screen for display, it is multifunctional because it links to a GPRS module, a camera, a speaker, headphone, a keypad and screen.

orbit timer manual pdf: *Trajectory and Orbit Plotter Instruction Manual* Richard Henry Frick, W. I. Rumer, E. H. Sharkey, 1963 A graphical method for obtaining the solution of a large class of trajectory and orbit problems is described. By this method it is possible, given a set of initial conditions, to construct the resulting trajectory or orbit and determine the velocity path angle, ground range, altitude, and time of flight corresponding to any point of the path. In addition, it is also possible to take into account the effects of earth rotation on the ballistic path and to determine the latitude and longitude of points on the earth trace, including the impact position. The equipment required for applying this method includes a trajectory chart, an earth rotation chart, and a protractor, copies of which are included. This equipment has been designed so that a user, with a knowledge of simple arithmetic and a few basic geometrical constructions, as well as the ability to follow directions, can obtain rapid solutions to trajectory and orbit problems with an accuracy of the order of 0.5 per cent in the results. The method should have considerable application to the class of problems not requiring the extreme precision of the high-speed digital computer. Such problems would include preliminary design missile performance determinations, feasibility studies, and trajectory and orbit prediction problems. (Author).
