Surveillance: ICAHS4 2022 Liz Alban, Salome Dürr, Carola Sauter-Louis, Victoria J. Brookes, Fernanda Dorea, 2023-10-23 The current COVID-19 pandemic has expanded lay people's vocabulary; PCR-testing is no longer mentioned only by virologists, nor are the terms basic reproduction ratio and herd-immunity limited to epidemiologists. This expansion of vocabulary that was previously only used in specialist settings already demonstrates global, societal impact. We have learnt that it is insufficient simply to act on disease emergence and spread. More focus is needed on prevention and surveillance of the precursors of emerging infectious disease, as well as early detection. To succeed in this, it is a necessity to collaborate across sectors - academics, governments, industry and the public - in a transdisciplinary way.

science fair board template pdf: Data Management in Large-Scale Education Research

Crystal Lewis, 2024-07-09 Research data management is becoming more complicated. Researchers are collecting more data, using more complex technologies, all the while increasing the visibility of our work with the push for data sharing and open science practices. Ad hoc data management practices may have worked for us in the past, but now others need to understand our processes as well, requiring researchers to be more thoughtful in planning their data management routines. This book is for anyone involved in a research study involving original data collection. While the book focuses on quantitative data, typically collected from human participants, many of the practices covered can apply to other types of data as well. The book contains foundational context, instructions, and practical examples to help researchers in the field of education begin to

understand how to create data management workflows for large-scale, typically federally funded, research studies. The book starts by describing the research life cycle and how data management fits within this larger picture. The remaining chapters are then organized by each phase of the life cycle, with examples of best practices provided for each phase. Finally, considerations on whether the reader should implement, and how to integrate those practices into a workflow, are discussed. Key Features: Provides a holistic approach to the research life cycle, showing how project management and data management processes work in parallel and collaboratively Can be read in its entirety, or referenced as needed throughout the life cycle Includes relatable examples specific to education research Includes a discussion on how to organize and document data in preparation for data sharing requirements Contains links to example documents as well as templates to help readers implement practices

science fair board template pdf: Patent Challenges for Standard-Setting in the Global Economy National Research Council, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, Committee on Intellectual Property Management in Standard-Setting Processes, 2013-10-07 Patent Challenges for Standard-Setting in the Global Economy: Lessons from Information and Communication Technology examines how leading national and multinational standard-setting organizations (SSOs) address patent disclosures, licensing terms, transfers of patent ownership, and other issues that arise in connection with developing technical standards for consumer and other microelectronic products, associated software and components, and communications networks including the Internet. Attempting to balance the interests of patent holders, other participants in standard-setting, standards implementers, and consumers, the report calls on SSOs to develop more explicit policies to avoid patent holdup and royalty-stacking, ensure that licensing commitments carry over to new owners of the patents incorporated in standards, and limit injunctions for infringement of patents with those licensing commitments. The report recommends government measures to increase the transparency of patent ownership and use of standards information to improve patent quality and to reduce conflicts of laws across countries.

science fair board template pdf: Global Governance of Intellectual Property in the 21st Century Mark Perry, 2016-05-24 This book analyses the governance foundations of innovation, brands, inventions, secrets and expression, which are the keys to a century based on knowledge. They are reflected in legal rights that have been fermenting over centuries of national policy deliberations on intellectual property rights, constantly in flux in the face of new advances in science, but overall a trend towards greater protectionism. As countries are challenged by the strictures of international agreements, often extorted through imbalanced power relationships, they seek their own national means for beneficial differentiation from the new global norms, whilst complying with international obligations. This book deals with the outcomes of regional governance of intellectual property, which often creates ripples in the search for harmony in the laws that form the basis for the future of intellectual property. The work has contributions that come from developing and developed nations, showing a common theme of the struggle to find the balance in an area of law that often does not provide clearcut solutions to real world environments. There are many intellectual property struggles illustrated in this work: patent at the boundaries of nature and invention, the need for drug development, which is driven by profit based on the patent monopoly; copyright, the expression of original thought, seeking to maximise exposure facilitated by the internet, but a system that facilitates rampant copying; trade marks, supporting company branding, seeks to exploit global branding through naming domains names; and other areas concomitant to the globalisation of intellectual property governance, such as foreign direct investment. This book holds up a mirror to the issues of world governance of intellectual property rights in this century, asking whether the direction we are currently following is in the best interest of global citizens, and showing the divergence that constraints are stimulating on a national level.
