Criteria for Selecting a Shell Tellus 46 Equivalent

Viscosity Grade

Ensure the substitute lubricant matches the 46 cSt viscosity at 40°C to maintain proper hydraulic system performance.

Performance Specifications

Look for equivalents that meet or surpass standards such as ISO 11158 HM or HL, DIN 51524 Part 2, or other relevant specifications.

Additive Package

Choose lubricants with similar additive technology—antioxidants, anti-wear agents, corrosion inhibitors, and demulsifiers—to ensure comparable performance.

Compatibility

Verify compatibility with existing seals, hoses, and other system components to prevent leaks or damage.

Certification and Standards Compliance

Ensure the product complies with industry standards such as API, ISO, or manufacturer-specific requirements.
