It covers the physical properties of sounds, articulatory mechanisms, and acoustic properties, establishing a solid foundation for subsequent sections.

Articulatory Phonetics

This section delves into how speech sounds are produced by the vocal apparatus. Key topics include:

- Articulatory features: place of articulation (e.g., bilabial, alveolar, velar), manner of articulation (e.g., plosive, fricative, nasal), and voicing.
- Speech organs: tongue, lips, palate, glottis, and their roles.
- Production processes: how different sounds are generated through coordinated movements.

Diagrams and spectrograms enhance understanding, illustrating the physical positioning of speech organs during sound production.

Acoustic Phonetics

This component emphasizes the physical transmission of speech sounds. Topics include:

- Sound waves: properties like frequency, amplitude, and duration.
- Spectrogram analysis: visual representation of sounds to interpret their acoustic features.
- Phonetic features: how acoustic signals differentiate phonemes and influence perception.

Understanding these aspects is crucial for fields like speech technology and audiology.

Auditory Phonetics

Focusing on perception, this section explores how speech sounds are received and processed by the auditory system. It discusses:

- Perceptual features: how listeners distinguish between sounds.
- Phonetic discrimination: methods to identify minimal pairs and phonetic contrasts.

- Perception challenges: issues faced by non-native speakers and individuals with hearing impairments.
