tim hoakes: *Challenging Beliefs* Tim Noakes, 2012-03-05 Tim Noakes is one of the world's leading authorities on the science behind sport and a successful sportsman in his own right. Through a lifetime of research, he has developed key scientific concepts in sport that have not only redefined the way elite athletes and teams approach their professions, but challenged conventional global thinking in these areas. In this new and updated edition of *Challenging Beliefs*, Noakes shares his views on everything from the myths perpetuated by the sports-drink industry to the prevalence of banned substances, the need to make rugby a safer sport and the benefits of a high-protein, low-carb diet. The teams and athletes with whom Noakes has worked make fascinating backdrops to these topics, highlighting the importance of science in sport in human terms. In providing an intimate look at the golden threads running through Noakes's life and career, this remarkable book reveals the landmark theories and principles generated by one of the greatest minds in the history of sports science.

tim hoakes: *Lore of Nutrition* Tim Noakes, 2017-11-01 In December 2010, Professor Tim Noakes was introduced to a way of eating that was contrary to everything he had been taught and was accepted as conventional nutrition 'wisdom'. Having observed the benefits of the low-carb, high-fat lifestyle first-hand, and after thorough and intensive research, Noakes enthusiastically revealed his findings to the South African public in 2012. The backlash from his colleagues in the medical establishment was as swift as it was brutal, and culminated in a misconduct inquiry launched by the Health Professions Council of South Africa. The subsequent hearing lasted well over a year, but Noakes ultimately triumphed, being found not guilty of unprofessional conduct in April 2017. In *Lore of Nutrition*, he explains the science behind the low-carb, high-fat/Banting diet, and why he champions this lifestyle despite the constant persecution and efforts to silence him. He also discusses at length what he has come to see as a medical and scientific code of silence that discourages anyone in the profession from speaking out against the current dietary guidelines. Leading food, health and medical journalist Marika Sboros, who attended every day of the HPCSA hearing, provides the fascinating backstory to the inquiry, which often reads like a spy novel. *Lore of Nutrition* is an eye-opener and a must-read for anyone who cares about their health.

tim hoakes: HEALTHCARE's OUT SICK - PREDICTING A CURE - Solutions that WORK !!!! Gary D. Miner, Linda Miner, Darrell L. Dean, 2019-01-04 The U.S. healthcare system is in complete chaos-disarray. Medical costs have increased significantly over the past 6 years with 70% increase for deductibles and 24% or more for health insurance premiums. All the while, workers earnings have either not increased or if they did, the pay raises were for less than the increase in the cost of medical care. The situation is unsustainable and the public wants the system fixed. This book offers ways of fixing the problems in healthcare. HEALTHCARE's OUT SICK - PREDICTING A CURE - Solutions that WORK !!!! first defines the healthcare in crisis problem. Through real patient experiences, the book describes the difficulties of getting through the maze of complexity among the plethora of silo providers which make up the industry. The heart of the book provides readers with a comprehensive solution that can work, a disruption that is necessary to provide Americans the medical care they need without the US public and healthcare providers and payors going into bankruptcy, insolvency or closure. This book delves into digitized medicine, payor and provider reimbursement models, and value-based healthcare delivery. It also includes a philosophy or mode of thinking and operation for the solutions that are needed for diagnosis-effective, cost-effective, and time-efficient healthcare delivery, of which digitized medicine, value-based care, and payor

reimbursement modes are just some of the factors. The authors propose that the real solution involves having the patient at the center of the issues and changing from an archaic gold standard way of thinking to a Predictive Analytic thinking where one gets at the real truth by doing real science that in the end becomes effective not only for the population but for the individual person. This all leads to real person-centered and person-directed medicine and healthcare delivery.

tim hoakes: *Tim Noakes: The Quiet Maverick* Daryl Ilbury, 2017-06-01 A dissident scientist, a disrupted media ... On 5 February 2014, world-renowned scientist Tim Noakes fired off a tweet into a highly volatile media space; the fallout threatened to destroy his career. This is the untold backstory. Veteran journalist and writer Daryl Ilbury unveils, layer by layer, a combustible mix of ignorance, suspicion and academic wrong-doing, played out in a highly disrupted media space, where consumers demand snappy answers to highly complex questions. It's the story of society's historical distrust of science, the fractious relationship between science and mainstream media, the intricacies of human nutrition, and the brutal fallout when a soft-spoken scientist with a taste for social media and a flair for challenging convention voiced his maverick opinion. Featuring exclusive interviews with Noakes, as well as with people who have worked closely with him, including former Springbok coach Jake White and polar swimmer Lewis Gordon Pugh, as well as award-winning journalists and fellow scientists and academics, some of whom now consider Noakes dangerous and out of control, this book promises to be as controversial as the man himself.

tim hoakes: *Sugar Free* Karen Thomson, 2016-11-25 Where fat was once regarded as the enemy, scientists now point to the huge amount of sugar we consume as being the real danger to our health. Karen Thomson's simple, effective and proven eight-week programme to quit sugar for good will dramatically improve your health while helping you to lost weight. Packed with recent scientific research and nutritional advice, it includes a chapter by research neuroscientist Dr Nicole Avena and provides eight weeks of meal plans, both vegetarian and non-vegetarian, put together by Emily Maguire. This updated international edition of *Sugar Free* features over 40 new mouth-watering new recipes developed to help you live a low-carb lifestyle.

tim hoakes: *A Statin Nation* Dr Malcolm Kendrick, 2018-12-27 If you have been told that you must take statins or risk a devastating heart attack or stroke, you need to read this book. Dr Kendrick, a well-known statin sceptic and author of the bestselling *The Great Cholesterol Con*, has returned to the diet-heart-cholesterol battlefield to warn that people are being conned. In relaxed and humorous style, he lifts the rock to allow the reader to peer underneath. He points out that statins, even in high-risk individuals, increase life expectancy by a mere four days after five years of treatment. Yet adverse effects have been swept under the carpet by researchers who are closely tied to the industry. The way to avoid heart disease, and strokes, is simple - but, as this riveting book shows, it has nothing to do with lowering cholesterol levels.

tim hoakes: *Research Abuse* Associate Professor Ralf Sundberg, 2020-10-19 In his book *Research abuse - how the food and drug industries pull the wool over your eyes*, Ralf Sundberg discusses questions regarding research in Nutrition, from a biological, social and economic perspective. Today, we understand that nutrition is not firstly to provide fuel, but more importantly to provide building blocks for the renewal of our cells and tissues. But nutritional science has from the fifties and on, been surrounded by myths and misinterpretations of the prevalent data. Policies and recommendations were formed in the absence of evidence, often by experts tied to commercial and political interests. In this book Dr Sundberg uses the examples of fat and cholesterol, not only to illustrate historical mistakes in this area, but also to demonstrate how we humans are subject to so many biases in so many areas. In fact researchers as all humans are formed by emotions, group thinking, hope of success, fears of many kinds, which many times leads to misconceptions, when put on print and regarded as facts, and live on for decades. Ralf Sundberg, a former general and transplant surgeon conducted a remarkable career, with transplant pioneers Folkert O. Belzer at UW-Madison in the mid-eighties, and with Thomas E. Starz at the University of Pittsburgh in the early nineties. Having retired from clinical work, apart from book writing, he is still active in research on diabetes, fats and cholesterol. He is the author of more than forty scientific papers,

many published in high-ranked journals, and has authored a number of books, published in Sweden and Norway. This is his first book, to be published in English.

tim hoakes: The Great Run Braam Malherbe, 2010-12-21 Everyone said it couldn't be done; even internationally renowned sports scientists such as Dr. Tim Noakes. Certainly no-one had done it before, though many had tried: to run the Great Wall of China, end to end, non-stop. The journey would start in the Gobi Desert, cross the jagged Taihang Shan range, and end at the Bo Sea. It would involve blood boiling heat and mummifying sandstorms, soul-numbing mountain nights, incidents with bandits and draconian officials, pig's-hean soup and witnessing large-scale environmental devastation. But on-one had counted on teh tenacity of South African nature-lover Braam Malherbe. In runningthe main intact section of the Grat Wall, 4 500 kilometres end to end, Braam and his running partner David Grier set a world first. But Braam would have to call on reserves far deeper - physically and emotionally - than even he realised he had. China was never going to let him off lightly; then again, it would not leave a worthy traveller unmoved or unchanged. What began as a running-away, from long-buried childhood trauma, family suffering and loss, as well as hurt felf for the state of the planet, would eventually become a journey towards inner peace and understanding. The book concludes with the writer running into a new vision of healing the planet, step by small step, one person at a time.

tim hoakes: Ballistic: The New Science of Injury-Free Athletic Performance Henry Abbott, 2025-05-06 Injuries are not destiny. This revolutionary new account of the science of injury prevention shows how “ballistic” movement can help you get strong, stay healthy, and be elite. The biggest victories of medical science—over polio, smallpox, heart attacks, and the like—are stories of prevention. Then there’s sports, where we just run around until something breaks, leading to pain, frustration, and sometimes even expensive surgery. Injuries are a major cause of society’s growing mobility crisis. What if we could predict and prevent them? Blending cutting-edge science with gripping storytelling, award-winning data journalist and competitive amateur athlete Henry Abbott reveals that we are on the cusp of a new era in sports medicine, built around the science of ballistic movements—leaping and landing—and the unique fingerprint of your body’s physics. Abbott’s inspiring narrative tells the story of sports scientist Dr. Marcus Elliott and the Peak Performance Project (P3), who use technology to study how athletes move and why they get hurt. Applying machine learning and lessons from biomechanics, medicine, and physiology, doctors at P3 can now detect elevated risk of an ACL tear or a pulled hamstring like an echocardiogram can see warning signs of a heart attack. Their data-driven findings are full of surprises. Your body’s most important defense against knee and ankle injuries are the little-known muscles in the lower leg and hip area, which typical workouts rarely target. Similarly, the glutes—not the core—do the most to prevent back pain. Transformative benefits flow from training underappreciated kinds of athleticism like rotation, deceleration, and relaxation. Most of all, science shows that the best athletes don’t avoid ballistics—they master them. Through riveting stories of elite athletes overcoming injuries and pushing themselves to the limit, Abbott presents an evidence-based case for intervening early to protect our bodies. And he suggests that we can all harness the science of ballistic movement not just to run fast or jump high but to move with joy and lead fulfilling athletic lives.

tim hoakes: Alone Brett Archibald, 2025-09-23 Solitude is terrifying and awe-inspiring in Alone. — The Wall Street Journal In April 2013, fifty-year-old Brett Archibald was on board a surf-charter boat, making a night-time crossing of the remote Mentawai Strait off Sumatra, Indonesia. In the middle of a storm, ill with severe food poisoning, he blacked out. When he came to, he found himself in the raging sea, sixty miles from shore. As Brett saw the lights of his boat disappearing into the darkness, it became clear that no one had seen him fall, and that no one would hear his shouts for help. He was alone in the ocean. It would be eight hours before his friends realized he was missing. At that point a frantic search began for a single man somewhere in thousands of square miles of heaving waves. The rough weather meant that no planes or helicopters could assist in the search. According to the experts, he should have died within ten to fourteen hours. Instead, Brett battled Portuguese man o' war and jellyfish, sharks, seagulls, and the stormy

seas for more than 28 hours. Alone is the remarkable tale of his miraculous survival and rescue. It is also the story of what it takes to defy extraordinary odds and the incredible power of the human spirit.

tim hoakes: Diet Cults Matt Fitzgerald, 2014-05-15 From "The Four Hour Body," to "Atkins," there are diet cults to match seemingly any mood and personality type. Everywhere we turn, someone is preaching the "One True Way" to eat for maximum health. Paleo Diet advocates tell us that all foods less than 12,000 years old are the enemy. Low-carb gurus demonize carbs, then there are the low-fat prophets. But they agree on one thing: there is only one true way to eat for maximum health. The first clue that that is a fallacy is the sheer variety of diets advocated. Indeed, while all of these competing views claim to be backed by "science," a good look at actual nutritional science itself suggests that it is impossible to identify a single best way to eat. Fitzgerald advocates an agnostic, rational approach to eating habits, based on one's own habits, life-style, and genetics/body type. Many professional athletes already practice this "Good Enough" diet, and now we can too and ditch the brainwashing of these diet cults for good.

tim hoakes: Achieving the Impossible Lewis Gordon Pugh, 2010-05-27 In July 2007, Lewis Gordon Pugh became the first person to swim at the North Pole, in temperatures that would kill a normal person, primarily to raise awareness of climate change. Nicknamed 'the human polar bear' for his ability to raise his body temperature at will, he has pioneered swims in the world's most hostile waters, redefining what it is possible to achieve in terms of endurance. A former member of the SAS, Lewis tells his fantastic story here for the first time. Chapters cover his childhood, growing up with his 'hero' Surgeon Rear Admiral father, his early life in South Africa, his gruelling training in the army's elite regiment, his inspiration and, of course, plenty of action/adventure stories, chronicling his many nail-biting endurance swims. With practical lessons taken from his own life, Lewis explains how recognising one's passions and taking calculated risks is essential for anyone looking to fulfil their goals. The book will also cover his expedition kayaking to the North Pole in summer 2008 and preparing for his most dangerous swim yet - on Everest! - planned for May 2010. His story is inspiring, entertaining and thrilling in equal measure, and its 39-year-old author is a much-needed role model for our times.

tim hoakes: RUN Fitzgerald Matt, 2010-05-24 Most serious runners don't realize their potential. They simply stop getting faster and don't understand why. The reason is simple: most runners are unable to run by feel. The best elite runners have learned that the key to faster running is to hear what their bodies are telling them. Drawing on new research on endurance sports, best-selling author Matt Fitzgerald explores the practices of elite runners to explain why their techniques can be effective for all runners. RUN: The Mind-Body Method of Running by Feel will help runners reach their full potential by teaching them how to train in the most personalized and adaptable way. Fitzgerald's mind-body method will revolutionize how runners think about training, their personal limits, and their potential. RUN explains how to interpret emotional and physical messages like confidence, enjoyment, fatigue, suffering, and aches and pains. RUN guides readers toward the optimal balance of intensity and enjoyment, volume and recovery, repetition and variation. As the miles add up, runners will become increasingly confident that they are doing the right training on the right day, from one season to the next. RUN marks the start of a better way to train. The culmination of science and personal experience, the mind-body method of running by feel

will lead runners to faster, more enjoyable training and racing.

But it's more than just a thirst quencher and a dominant brand. First in Thirst is the story of a phenomenon that grew from the practice fields of college football into a true icon of the way we play, watch, and experience sports—from the Pee Wees to the pros. Published to coincide with the 40th anniversary of Gatorade's invention, First in Thirst is equally a sports story, from its invention and testing with the University of Florida Gators to the Gatorade bath and its near-universal appeal to athletes, coaches and sports fans everywhere.

tim hoakes: Hits and Missives Ben Trovato, 2006 Wildly hilarious and almost too outrageous to believe, the correspondence of South Africa's most famous humor writer has now been compiled into one volume comprised of the author's (and fans') favorite letters. Assembled from his three previous compilations, this newest volume is a greatest hits of the riotous letters Ben Trovato has addressed to the rich and powerful abroad and the sidesplitting responses he received. Sometimes shocking, yet always funny, this collected works is Trovato at his best.

tim hoakes: One Midlife Crisis and a Speedo Darrel Bristow-Bovey, 2014-11-05 If you don't choose your midlife crisis, your crisis will choose you. Darrel Bristow-Bovey has tried his best to deny to himself that he's getting older, but you can't hide from the truth in the changing-room mirror. One day, surrounded by sharks on a small boat in the Indian Ocean, he suddenly realises his midlife crisis is already under way. Running a gauntlet of bucket lists, prostate examinations and sexual misadventures, Darrel sets himself a task: to follow in the footsteps of Lord Byron and the Greek hero Hercules and swim across the Dardanelles in Turkey. The only problem is that he's old and tried and lazy and can't swim very well. One Midlife Crisis and a Speedo is a warm, witty, eventually wise journey into the terrors and absurdities and grumpy compensations of middle age that will speak to every man and woman who has ever noticed that time is ticking by faster every day.

tim hoakes: Nutrition in Crisis Richard David Feinman, 2019 Why Low Carb Should Be the Default Approach for Managing and Preventing Metabolic Syndrome and Other Chronic Diseases. Almost every day it seems a new study is published that shows you are at risk for diabetes, cardiovascular disease, or all-cause mortality due to something you've just eaten for lunch. Many of us no longer know what to eat or who to believe. In the Nutrition Revolution; distinguished biochemist Richard Feinman, PhD, cuts through the noise, explaining the intricacies of nutrition and human metabolism in accessible terms. He lays out the tools you need to navigate the current confusion in the medical literature and its increasingly bizarre reflection in the media. At the same time, The Nutrition Revolution offers an unsparing critique of the nutritional establishment, which continues to demonize fat and refute the benefits of low-carbohydrate and ketogenic diets, all despite decades of evidence to the contrary. Feinman tells the story of the first low-carbohydrate revolution fifteen years ago, how it began, what killed it, and why a second revolution is now reaching a fever pitch. He exposes the backhanded tactics of a regressive nutritional establishment that ignores good data and common sense, and highlights the innovative work of those researchers who have broken rank. Entertaining, informative, and irreverent, Feinman paints a broad picture of the nutrition world: the beauty of the underlying biochemistry; the embarrassing failures of the medical establishment; the preeminence of low-carbohydrate diets for weight loss, diabetes, other metabolic diseases, and even cancer; and what's wrong with the constant reports that common foods represent a threat rather than a source of pleasure.--
