warforce laser: China's Military Modernization Richard D. Fisher, Jr., 2008-09-30 China's rise to global economic and strategic eminence, with the potential for achieving pre-eminence in the greater-Asian region, is one of the defining characteristics of the post-Cold War period. This work offers a basic understanding of the military-strategic basis and trajectory of a rising China, provides background, and outlines current and future issues concerning China's rise in strategic-military influence. The next decade may witness China's assertion of military or strategic pressure on Japan, the Korean Peninsula, India, the South China Sea, the Taiwan Strait, Central Asia, or even on behalf of future allies in Africa and Latin America. While conflict is not a foregone conclusion, as indicated by China's increasing participation in many benign international organizations, it is a fact that

China's leadership will pursue its interests as it sees them, which may not always coincide with those of the United States, its friends, and allies. Until now, no single volume has existed that provides an authoritative, comprehensive, and concise description of China's evolving geo-strategy or of how China is transforming its military to carry out this strategy. Fisher examines how China's People's Liberation Army (PLA) remains critical to the existence of the Chinese Communist government and looks at China's political and military actions designed to protect its expanded strategic interests in both the Asia-Pacific and Central to Near-Asian regions. Using open sources, including over a decade of unique interview sources, Fisher documents China's efforts to build a larger nuclear force that may soon be protected by missile defenses, modern high technology systems for space, air, and naval forces, and how China is now beginning to assemble naval, air, and ground forces for future power projection missions. His work also examines how the United States and other governments simultaneously seek greater engagement with China on strategic concerns, while hedging against its rising power. Although China faces both internal and external constraints on its rise to global eminence, it cannot be denied that China's government is pursuing a far-reaching strategic agenda.

warforce laser: Military Space Power James Fergusson, Wilson W.S. Wong, 2010-02-26 This handbook examines the militarization of space, providing a fair and balanced discussion of the emerging issues concerning space security and defense. The militarization of space is already underway, with unpredictable consequences for the way war will be conducted in the future. **Military Space Power: A Guide to the Issues** examines the militarization of space from historical, technological, and geopolitical angles. It traces space militarization from concepts proposed before World War II through the use of space for military surveillance and communications purposes to the actual deployment of weapons that pass through high-altitude space, such as ballistic missiles and nuclear-armed interceptors. The book focuses on the main space pioneers like the United States, Russia, and China, but also includes discussion of potential future players. It looks at the state of current space technology, but also projects how recent inventions or new discoveries might be weaponized for the space environment. And it analyzes how the militarization of space might influence international relations. The result is a fair and balanced discussion of the emerging issues concerning space security and defense.

warforce laser: A History of the Laws of War: Volume 2 Alexander Gillespie, 2011-10-07
This unique new work of reference traces the origins of the modern laws of warfare from the earliest times to the present day. Relying on written records from as far back as 2400 BCE, and using sources ranging from the Bible to Security Council Resolutions, the author pieces together the history of a subject which is almost as old as civilisation itself. The author shows that as long as humanity has been waging wars it has also been trying to find ways of legitimising different forms of combatants and ascribing rules to them, protecting civilians who are either inadvertently or intentionally caught up between them, and controlling the use of particular classes of weapons that may be used in times of conflict. Thus it is that this work is divided into three substantial parts: Volume 1 on the laws affecting combatants and captives; Volume 2 on civilians; and Volume 3 on the law of arms control. This second book on civilians examines four different topics. The first topic deals with the targetting of civilians in times of war. This discussion is one which has been largely governed by the developments of technologies which have allowed projectiles to be discharged over ever greater areas, and attempts to prevent their indiscriminate utilisation have struggled to keep pace. The second topic concerns the destruction of the natural environment, with particular regard to the utilisation of starvation as a method of warfare, and unlike the first topic, this one has rarely changed over thousands of years, although contemporary practices are beginning to represent a clear break from tradition. The third topic is concerned with the long-standing problems of civilians under the occupation of opposing military forces, where the practices of genocide, collective punishments and/or reprisals, and rape have occurred. The final topic in this volume is about the theft or destruction of the property of the enemy, in terms of either pillage or the intentional devastation of the cultural property of the opposition. As a work of reference this set of three books is unrivalled, and will be of immense benefit to scholars and practitioners researching and advising on the laws of warfare. It also tells a story which throws fascinating new light on the history of international law and on the history of warfare itself.
