disability digest: *Gender Balance and Gender Bias in Education* Deirdre Raftery, Maryann Valiulis, 2013-09-13 This book presents a compelling range of international research on the issues of gender balance and gender bias in education. The chapters draw on cutting edge work from the US, Latin America, the UK, Ireland and Africa, presenting readers with new insights into how educators and students often negotiate deeply ingrained prejudices that are expressed in gendered terms. The book reflects research that draws on a range of methodologies, and both historical and contemporary education contexts are examined. Drawing on historical research, the book widens our understanding of gender issues in education, and provides chapters on physical activity for girls in nineteenth century America, and on the 'patriarchal imperative' in mission education in Africa in the nineteenth century. Turning to research on contemporary education settings, the book explores the global phenomenon of the feminisation of teaching. It also illustrates how teachers work in classrooms in which boys' expressions of masculinities explicitly challenge school order, and looks at the performance of both masculinities and femininities in several education contexts. The book also includes absorbing work on the practices and processes that contribute to the gendering of digital technologies, and it demonstrates ways in which parents unwittingly accept the gendered management of internet 'risk' for their daughters. This book was published as a special issue of Gender and Education.

disability digest: *Disability and Neoliberal State Formations* Karen Soldatic, 2018-08-06 Disability and Neoliberal State Formations explores the trajectory of neoliberalism in Australia and its impact on the lives of Australians living with disability, including Aboriginal and Torres Strait Islander peoples. It examines the emergence, intensification and normalisation of neoliberalism across a 20-year period, distilling the radical changes to disability social security and labour-market law, policy and programming, and the enduring effects of the incremental tightening of disability eligibility carried out by Australian governments since the early 2000s. Incorporating qualitative interviews with disabled people, disability advocates, services and the policy elite, alongside extensive documentary material, this book brings to the fore the compounding effects of neoliberal reforms for disabled people's wellbeing and participation. The work is of international significance as it illustrates the importance of looking beyond the UK, EU and the USA to critically understand

the historical development and policy mobility of disability neoliberal retraction from smaller economies, such as Australia, to the global economic centre.

disability digest: Handbook for Achieving Gender Equity Through Education Susan S. Klein, Barbara Richardson, Dolores A. Grayson, Lynn H. Fox, Cheris Kramarae, Diane S. Pollard, Carol Anne Dwyer, 2014-05-22 First published in 1985, the Handbook for Achieving Gender Equity Through Education quickly established itself as the essential reference work concerning gender equity in education. This new, expanded edition provides a 20-year retrospective of the field, one that has the great advantage of documenting U.S. national data on the gains and losses in the efforts to advance gender equality through policies such as Title IX, the landmark federal law prohibiting sex discrimination in education, equity programs and research. Key features include: Expertise - Like its predecessor, over 200 expert authors and reviewers provide accurate, consensus, research-based information on the nature of gender equity challenges and what is needed to meet them at all levels of education. Content Area Focus - The analysis of gender equity within specific curriculum areas has been expanded from 6 to 10 chapters including mathematics, science, and engineering. Global/Diversity Focus - Global gender equity is addressed in a separate chapter as well as in numerous other chapters. The expanded section on gender equity strategies for diverse populations contains seven chapters on African Americans, Latina/os, Asian and Pacific Island Americans, American Indians, gifted students, students with disabilities, and lesbian, gay, bisexual, and transgender students. Action Oriented - All chapters contain practical recommendations for making education activities and outcomes more gender equitable. A final chapter consolidates individual chapter recommendations for educators, policymakers, and researchers to achieve gender equity in and through education. New Material - Expanded from 25 to 31 chapters, this new edition includes: *more emphasis on male gender equity and on sexuality issues; *special within population gender equity challenges (race, ability and disability, etc); *coeducation and single sex education; *increased use of rigorous research strategies such as meta-analysis showing more sex similarities and fewer sex differences and of evaluations of implementation programs; *technology and gender equity is now treated in three chapters; *women's and gender studies; *communication skills relating to English, bilingual, and foreign language learning; and *history and implementation of Title IX and other federal and state policies. Since there is so much misleading information about gender equity and education, this Handbook will be essential for anyone who wants accurate, research-based information on controversial gender equity issues—journalists, policy makers, teachers, Title IX coordinators, equity trainers, women's and gender study faculty, students, and parents.
