edgenuity status: Algorithmic Rights and Protections for Children Mizuko Ito, Remy Cross, Karthik Dinakar, Candice Odgers, 2023-06-27 Essays on the challenges and risks of designing algorithms and platforms for children, with an emphasis on algorithmic justice, learning, and equity. One in three Internet users worldwide is a child, and what children see and experience online is increasingly shaped by algorithms. Though children's rights and protections are at the center of debates on digital privacy, safety, and Internet governance, the dominant online platforms have not been constructed with the needs and interests of children in mind. The editors of this volume, Mizuko Ito, Remy Cross, Karthik Dinakar, and Candice Odgers, focus on understanding diverse children's evolving relationships with algorithms, digital data, and platforms and offer guidance on how stakeholders can shape these relationships in ways that support children's agency and protect them from harm. This book includes essays reporting original research on educational programs in AI relational robots and Scratch programming, on children's views on digital privacy and artificial intelligence, and on discourses around educational technologies. Shorter opinion pieces add the perspectives of an instructional designer, a social worker, and parents. The contributing social,

behavioral, and computer scientists represent perspectives and contexts that span education, commercial tech platforms, and home settings. They analyze problems and offer solutions that elevate the voices and agency of parents and children. Their essays also build on recent research examining how social media, digital games, and learning technologies reflect and reinforce unequal childhoods. edgenuity status: *An Ed-Tech Tragedy?* Mark West, 2025-10-10 The COVID-19 pandemic pushed education from schools to educational technologies at a pace and scale with no historical precedent. For hundreds of millions of students, formal learning became fully dependent on technology – whether internet-connected digital devices, televisions or radios. *An Ed-Tech Tragedy?* examines the numerous adverse and unintended consequences of the shift to ed-tech. It documents how technology-first solutions left a global majority of learners behind and details the many ways education was diminished even when technology was available and worked as intended. Using tragedy as a metaphor and borrowing the organization of a three-act theatrical play, the book shows how technology-first modes of learning introduced novel health and safety risks, handed significant control of public education to for-profit companies, expanded invasive digital surveillance and carried detrimental environmental repercussions, in addition to adversely impacting educational access, equity, quality and outcomes in most contexts. Dedicated sections consider alternative and less technology-reliant educational responses to COVID-19 disruptions that had the potential to be more inclusive and equitable. The analysis further explains how pandemic models of learning are rippling beyond school closures and influencing the future of education. Holistically, the work invites readers to reconsider a turbulent chapter in education history and reexamine the purposes and roles of technology in education.

edgenuity status: Status Anxiety Alain De Botton, 2005-05-10 "There's no writer alive like de Botton" (Chicago Tribune), and now this internationally heralded author turns his attention to the insatiable human quest for status—a quest that has less to do with material comfort than love. Anyone who's ever lost sleep over an unreturned phone call or the neighbor's Lexus had better read Alain de Botton's irresistibly clear-headed new book, immediately. For in its pages, a master explicator of our civilization and its discontents explores the notion that our pursuit of status is actually a pursuit of love, ranging through Western history and thought from St. Augustine to Andrew Carnegie and Machiavelli to Anthony Robbins. Whether it's assessing the class-consciousness of Christianity or the convulsions of consumer capitalism, dueling or home-furnishing, Status Anxiety is infallibly entertaining. And when it examines the virtues of informed misanthropy, art appreciation, or walking a lobster on a leash, it is not only wise but helpful.

edgenuity status: An Inquiry Into Status Consistency Barry David Lebowitz, 1967

edgenuity status: All That Glitters Is Not Gold Huachao Gao, 2017 This research proposes the relationship between Power Distance Belief (PDB) and status consumption is moderated by the salience of others and their associated status (others' status). When others' status is not superior (similar or inferior), high PDB consumers are more likely to engage in status consumption than low PDB consumers. However, when others' status is superior, high PDB consumers are less likely to engage in status consumption. Both signaling effectiveness and need for status underlie the effect of PDB on status consumption. Need for status mediates the effect of PDB only when others' status is not superior whereas signaling effectiveness mediates the effect of PDB on status consumption when others' status is superior, similar or inferior. Compared to low PDB consumers, high PDB consumers perceive greater signaling effectiveness when others' status is inferior or similar, but perceive less signaling effectiveness, and therefore engage in less status consumption, when others' status is superior. When status goods are consumed in private, and therefore not effective at signaling status, the interaction of others' status and PDB is mitigated. This research articulates the nuanced effect of PDB on status consumption depending on others' status as well as the multiple mechanisms underlying status consumption.
