heat.

Installation Process

Setting up a Garrison portable air conditioner is a straightforward process. Here is a step-by-step guide to help you with the installation:

1. **Select a Location:** Choose a location near a window and an electrical outlet. Ensure there is enough space for the unit and airflow.
2. **Prepare the Window Kit:** Follow the instructions provided to assemble the window installation kit, which typically includes a frame and weather sealing material.
3. **Install the Exhaust Hose:** Attach the exhaust hose to the unit and extend it to the window kit. Make sure it is securely connected to prevent air leaks.
4. **Seal the Window:** Close the window on the frame of the window kit to create a tight seal, preventing hot air from entering the room.
5. **Plug in the Unit:** Connect the air conditioner to a nearby electrical outlet and turn it on.

Following these steps will ensure that your Garrison portable air conditioner is installed correctly and ready to provide cooling relief.

Maintenance Tips

To keep your Garrison portable air conditioner running efficiently, regular maintenance is crucial. Here are some tips:

- **Clean or Replace Filters:** Check the air filters every month and clean or replace them as needed. Dirty filters can reduce efficiency and air quality.
- **Inspect the Exhaust Hose:** Ensure the exhaust hose is free from obstructions and is securely connected.
- **Clean the Unit:** Wipe down the exterior of the unit regularly to prevent dust buildup and maintain aesthetics.
- **Check Drainage:** Depending on the model, you may need to empty the water tank periodically. Some units come with a self-evaporative feature, while others require manual draining.
- **Store Properly:** If you plan to store the unit during the off-season, clean it thoroughly and store it in a cool, dry place.

Common Issues and Troubleshooting

While Garrison portable air conditioners are generally reliable, users may encounter some common issues. Here are a few problems and their potential solutions:

Unit Doesn't Cool Properly

- Check the Temperature Setting: Ensure the thermostat is set to a cooler temperature.
- Inspect Air Filters: Clogged filters can restrict airflow; clean or replace them.
- Exhaust Hose Issues: Make sure the exhaust hose is not kinked or blocked.

Water Leakage

- Check for Proper Drainage: Ensure the water tank is not full and that drainage is functioning properly.
- Inspect Seals: Look for any gaps around the window kit that might be allowing moisture to escape.

Unit Won't Turn On

- Check the Power Supply: Confirm that the unit is plugged in and that the outlet is functioning.
- Reset the Unit: Unplug the air conditioner for a few minutes, then plug it back in to reset it.
