pyramid template printable: Intelligent Video Event Analysis and Understanding Jianguo Zhang, Ling Shao, Lei Zhang, Graeme A. Jones, 2011-01-19 With the vast development of Internet capacity and speed, as well as wide adoption of media technologies in people's daily life, a large amount of videos have been surging, and need to be efficiently processed or organized based on interest. The human visual perception system could, without difficulty, interpret and recognize thousands of events in videos, despite high level of video object clutters, different types of scene context, variability of motion scales, appearance changes, occlusions and object interactions. For a computer vision system, it has been very challenging to achieve automatic video event understanding for decades. Broadly speaking, those challenges include robust detection of events under clutter, event interpretation under complex scenes, multi-level semantic event inference, putting events in context and multiple cameras, event inference from object interactions, etc. In recent years, steady progress has been made towards better models for video event categorisation and recognition, e. g. , from modelling events with bag of spatial temporal features to discovering event context, from detecting events using a single camera to inferring events through a distributed camera network, and from low-level event feature extraction and description to high-level semantic event classification and recognition. Nowadays, text based video retrieval is widely used by commercial search engines. However, it is still very difficult to retrieve or categorise a specific video segment based on their content in a real multimedia system or in surveillance applications.

pyramid template printable: *Using Comic Art to Improve Speaking, Reading and Writing* Steve Bowkett, 2012-07-26 Using Comic Art to Improve Speaking, Reading and Writing uses children's interest in pictures, comics and graphic novels as a way of developing their creative writing abilities, reading skills and oracy. The book's underpinning strategy is the use of comic art images as a visual analogue to help children generate, organise and refine their ideas when writing and talking about text. In reading comic books children are engaging with highly complex and structured narrative forms. Whether they realise it or not, their emergent visual literacy promotes thinking skills and develops wider metacognitive abilities. Using Comic Art not only motivates children to read more widely, but also enables them to enjoy a richer imagined world when reading comics, text based stories and their own written work. The book sets out a range of practical techniques and activities which focus on various aspects of narrative, including: using comic art as a visual organiser for planning writing openings and endings identifying with the reader, using different genres and developing characters creating pace, drama, tension and anticipation includes 'Kapow!' techniques to kick start lessons an afterword on the learning value of comics. The activities in Using Comic Art start from this baseline of confident and competent comic-book readers, and show how skills they already possess can be transferred to a range of writing tasks. For instance, the way the panels on a comic's page are arranged can serve as a template for organising paragraphs in a written story or a piece of non-fiction writing. The visual conventions of a graphic novel - the

shape of speech bubbles or the way the reader's attention is directed – can inform children in the use of written dialogue and the inclusion of vivid and relevant details. A creative and essential resource for every primary classroom, Using Comic Art is ideal for primary and secondary school teachers and TAs, as well as primary PGCE students and BEd, BA Primary Undergraduates.
