365 quotes for 2022: Bion Nicola Abel-Hirsch, 2023-04-13 Bion's life spanned key events in the twentieth century. Born in India in 1897, he came to boarding school in England aged 8 and at 18 fought in the tanks in World War One. He trained as a doctor between the wars and, in his World War Two work for the army, he was an innovator. After the war, he became a patient of Melanie Klein, qualified as a psychoanalyst, and was part of an extraordinary period in psychoanalysis of work with psychotic mechanisms in patients. In the late 1950s, he identified the configuration container/contained as being at the heart of human development. He looked outside of psychoanalysis to philosophers, scientists, mathematicians, and even theo-mystical thinkers. His work evolved radically throughout the 1960s and, at age 70 when many would be thinking of slowing down, he emigrated to California and began to travel internationally, giving lectures and supervisions across three continents. After Freud, Bion appears to be the most quoted psychoanalyst of our time and this book provides the opportunity, even for those familiar with his work, to gain insight into its sheer breadth, showcased so brilliantly in this slim volume. As author of *Bion: 365 Quotes*, Nicola Abel-Hirsch's immersion in Bion's vast oeuvre has enabled a comprehensive introduction to Bion and his work. Her lightness of touch, whilst retaining the necessary depth, makes it a joy to read. Bion and his work can be somewhat enigmatic but Abel-Hirsch's understanding offers the ideal introduction to the man and his work.

365 quotes for 2022: *Bombay Review & Other Stories* Ravi Valluri, *Bombay Review & Other Stories* is a collection of stories inspired by real life incidents. The stories are woven around tales of drama, romance, unrequited love, unbridled ambition, avarice, murder mysteries, politics, legacies, the conflict between ethics and what is purportedly unethical, about writers (accomplished and the one's emerging), singers and artistes, betrayal, issues pertaining to sexuality, sex change, faith, hope, and the law of attraction. The drabbles are drawn on occurrences which take place around us in our daily lives. I have been inspired by the epic Mahabharata, Panchatantra tales, and Zen stories as they capture human emotions and behaviour in totality which resonate in my stories in current days. To my mind life is a synodic curve, with upheavals, storms, vicissitudes, and great moments. Nothing is purely white or black. There is a vast shade of grey in between. Humans always have a choice before them and take the plunge. Characters like Karna, Arjuna, Dronacharya, Buddha, Ashwathama, Bhishma, Duryodhana, Shakuni, various Zen Masters and heroes and villains from Panchatantra find a place in the stories set in present times.

365 quotes for 2022: *The Prime Ministerial Court* R. A. W. Rhodes, 2024-10-25 Court politics is about who in British government did what to whom, when, how, why, and with what consequences. In *The Prime Ministerial Court* Rod Rhodes provides a thorough depiction of the court politics of the Conservative governments of the twenty-first century, namely the courts of David Cameron, Theresa May, and Boris Johnson. Exploring specific topics, including the courtiers, the prime minister's craft, reshuffles, resignations, and leadership challenges, and the political games and feuds in the court between ministers, advisers, and civil servants, Rhodes concludes that the British government has a new Establishment in which the skills of 'knavery' abound. He finds evidence of betrayal, revenge, lying, scandals, and bullying with such machinations oiled by gossip, humour, and alcohol. Analysing the everyday practice of the 'dark arts' by the British political and administrative elite, each chapter includes a short case study of the court in action, covering the education wars, the 2018 election, and the Covid-19 crisis. Each case illustrates the personal, electoral, and governmental consequences of court politics. Rhodes warns that there are more and more knaves, decency is in decline, and British government needs 'rules for rulers'. Above all, he cautions citizens - 'beware, here be dragons'.

365 quotes for 2022: *Negative Hallucinos in Wilfred Bion's Theory of Transformations* Rodrigo Barahona, 2024-11-01 In this illuminating volume, Rodrigo Barahona takes up the question of transformations in hallucinos in Wilfred Bion's work. The book discusses how the analyst's functioning, his receptivity and ability to make sense out of what is unconsciously occurring between

himself and the patient, and the ability to find words to represent it—the basic psychoanalytic task—is enhanced when the distinction between two basic types of transformations in hallucinosis can be borne in mind: transformations in positive hallucinosis and transformations in negative hallucinosis. In the psychoanalytic literature, this distinction has not been formally established, with the general term “transformations in hallucinosis” used for both processes. This book cuts a clearer distinction between the two, describing their distinct though overlapping metapsychologies, and charts the clinical implications. In making these distinctions, the book draws on André Green’s work, arguing for a continuity between Green’s negative hallucination and Bion’s theory of thinking and transformations in negative hallucinosis. The clinical implications of working with this concept are discussed in relation to the work of contemporary psychoanalytic authors such as Civitarese, Cassorla, Mawson, and Meltzer. By drawing comparisons and making specific connections between the work of Bion and Green, and extending these connections to the clinical and metapsychological writings of leading contemporary analysts, *Negative Hallucinosis in Wilfred Bion’s Theory of Transformations* will be of great interest to practitioners and scholars at all levels interested in the work of Wilfred Bion and this extension to his theory of transformations.

365 quotes for 2022: *Compassion: From Neuroscience to New Horizons and Innovative, Inclusive Research Agendas* Kathryn Waddington, Julian Manley, Trudi Edginton, Jason Kanov, 2024-01-11 The nature and science of compassion encompasses many aspects of human behavior, social and organizational experience, with resultant debate about its definition, meaning and application. Research, theorizing and scholarship is spread across a wide range of methodological, disciplinary, historical, and cultural perspectives including psychology, sociology, psychosocial studies, organizational science, inter/national politics, and evolutionary studies. Global concerns relating to the climate crisis, COVID-19 pandemic, and mass movements of displaced people all point to an urgent need for compassion in all human interactions. New and innovative interdisciplinary approaches, agendas, and paradigms are needed to both compliment, and critique, existing understandings of the meaning and applications of compassion in all its diverse and complex forms. In a world where there appears to be increasing demand for simplification and quantification from governments and policy makers, questions must be asked about what this means for psychology and social science research. The tendency towards post/positivist reductionism has led to critiques that universities have become factories that produce sterile, derivative, unimaginative writing. 21st-century universities have been described as ‘anxiety machines’, lacking in compassion, and creating more competition and stress than knowledge. Arguably, research into compassion should take place in compassionate disciplinary and institutional cultures. We all have a role to play in

addressing the lack of compassion in universities, which will involve an institutional level shift from individual-level competition to group-level collaboration. Importantly, recent advances in compassion research promise gains in understanding in both the science and neuroscience of human experience, and in applications of that work to improve humankind and the world around us. Qualitative research in psychology and psychosocial approaches, although becoming more visible, still remain a minority endeavor within the discipline. This Research Topic offers the opportunity to foreground the values and virtues of qualitative psychology, alongside more tried and tested approaches.

365 quotes for 2022: Digital Detox Victor de la Fuente, 2022-06-02 *Digital Detox* is a book born out of the need to reclaim control over our time and attention. We live surrounded by screens, notifications, and stimuli that demand our focus at every moment. And while technology offers us infinite possibilities, it also drags us into a state of stress and overload that erodes our concentration, our calm, and at times even our very perception of time and identity. This book does not propose renunciation, but rather reconnection. It invites us to take a conscious look at our relationship with the digital world—from smartphones to social media—with both its light and its shadows, and encourages us to chart a path toward a more human balance. Through a simple and gradual detox process, the author shows us how to identify the habits that distract us, how to set boundaries that protect us, and how to transform technology into a tool at our service, instead of becoming instruments of technology. The reading goes beyond practical advice—though it includes it—it is also a guide toward a new way of being present, and toward understanding the importance of the crossroads we face. Regaining mental calm in a hyperconnected world does not mean fleeing from technology, but learning to live with it consciously, instead of living on autopilot. *Digital Detox* rethinks our relationship with the world. A guide for those who want to harness technology without losing what matters most: the ability to choose, to focus, and to live with serenity amid the noise.

365 quotes for 2022: Poems from a metal heart Victor de la Fuente, 2022-01-01 This book is a co-creation between the AI and me—a poetry collection born from collaboration, not mere editing. Together, we wrote the content from scratch, exploring the possibilities of creation when human imagination meets artificial intelligence. In detail, this book is both the record of the experiment and a reflection on it. It shows how I used AI to write poetry, alongside short philosophical essays examining the implications of artificial intelligence in our age. It also contains a series of thought-provoking questions and considerations about AI—inviting you to reflect on its role, potential, and impact on creativity, society, and the human mind. The poems themselves traverse universal themes: Love, Religion, Nature, Death, Life. Some are more guided by my prompts, others nearly unguided, yet all are ultimately written by the AI. Each verse carries its own voice, rhythm, and surprises, a product of this unusual partnership. Evaluating this work is not straightforward. In poetry, meaning is elusive. Does it seem nonsensical because an AI wrote it, or because poetry itself resists rigid interpretation? Are we projecting significance onto the lines, or is there something hidden within the text, waiting to be discovered? The answer is yours. The value of this book is for you to decide—your perception, your reflection, your interpretation. The AI and I have created; now it is your turn to find meaning and engage with the questions it raises.

365 quotes for 2022: The Somato-Psychic Realm David G. Power, Dolan Power, 2025-05-01 Influenced by the groundbreaking work of Wilfred Bion, *The Somato-Psychic Realm: Analytic Receptivity and Resonance* sees 10 internationally acclaimed psychoanalysts explore the complex interrelationship between our psychic and somatic selves, and highlight its promising riches and devastating disruptions. Explored theoretically and illustrated with vivid clinical examples, the contributors in this volume map our current understanding on the fascinating subject of psychic and somatic selves, reframing it as the 'somato-psychic realm'. This collection of essays brings together the current thinking, reflections, and clinical understanding of prominent Bionian psychoanalytic practitioners and scholars, from Rudi Vermote to Judy Eekhoff, each of whom have developed particular interests and expertise in analytically approaching the realm of the somato-psychic. The reader is offered extensions of theory and vivid clinical examples and invited to consider many questions central to contemporary psychoanalytic practice: Does the body think and if so, how does

the analyst converse with it? Is thinking in a psychoanalytic sense best conceived of as a combined function of the soma and psyche? How does this perspective reorient analytic technique? Can we conceptualise a body-to-body dimension of the analytic experience, and in the analytic encounter how does this dimension serve a vitalising function for the patient while remaining outside of the usual verbal and symbolising exchanges between analyst and patient? What is the fate of failures and disruptions in the somato-psycho relationship and how does the analyst hear, recognise, and respond to these failures? How does the analyst make subjective space to experience in herself the presence of these disruptions? What transformations in our technical stance does this type of clinical presentation require? As they approach the challenges of the somato-psycho realm, readers will find themselves drawn into this conversation, invited by a thought-provoking foreword by Patrick Miller. It will be a vital resource for psychoanalysts in training and practice alike looking for a greater recognition of and ability to respond to problems ranging from frank somatic disorders to failures in symbolisation and thought process and the non-neurotic states of mind that accompany these disorders.

365 quotes for 2022: Wisdom from Rome Serena Connolly, 2022-10-03 For about one thousand years, the *Distichs of Cato* were the first Latin text of every student across Europe and latterly the New World. Chaucer, Cervantes, and Shakespeare assumed their audiences knew them well—and they almost certainly did. Yet most Classicists today have either never heard of them or mistakenly attribute them to Cato the Elder. The *Distichs* are a collection of approximately 150 two-line maxims in hexameters that offer instructions about or reflections on topics such as friendship, money, reputation, justice, and self-control. *Wisdom from Rome* argues that Classicists (and others) should read the *Distichs*: they provide important insights into the ancient Roman literate masses' conceptions of society and their views of relationships between the individual, family, community, and state. Newly dated to the first century CE, they are an important addition and often corrective to more familiar contemporary texts that treat the same topics. Moreover, as the field of Classics increasingly acknowledges the intellectual importance of exploring the reception of Classical texts, an introduction to one of the most widely read ancient texts for many centuries is timely and important.

365 quotes for 2022: The Promises and Pitfalls of Technology in Higher Education Norman Clark Capshaw, 2023-08-04 What will universities look like in 30- or 40-years' time? It is a story told in three acts. The first act takes the reader through a history of the modern university, highlighting major innovations that have transformed the academy since the founding of the University of Bologna in 1088. A second act builds on this history and transports the reader to the future, observing the application of these technologies in a future university from the point of view of professors, administrators, and students, as we tour the transformed campus with them. The third act examines how these technologies might be adopted most effectively through the combined effort of university leaders, administrators, faculty and students.
