Four years ago, the news of the divorce of the Billionaire Mo Liancheng and his new wife Mu Qingqing had spread like wildfire throughout the city. Since then, Mu Qingqing had disappeared for four years. Four years later, the new actress, Mu Qingqing, won numerous awards for a single play, while rumors of her spread like wildfire. At the party, Mu Qingqing held a goblet in her hand. With a slightly dazed smile in her slightly drunk eyes, she said, Let me tell you, Mo Liancheng isn't

as scary as he looks ... The surroundings instantly quietened down. Countless pairs of eyes stared at the ashen-faced man behind her. She acted as if she didn't feel anything as she continued laughing heartless. Be good, don't make a fuss, wife. His voice slid past her ear. ceo speech on company anniversary: Edmund M. Burke Dan A. Bavly, 1999-02-28 Dan Bavly takes a fresh look at how business is supervised and how that system can be improved. He begins by assessing the performance of the government regulator and suggests reasons for the failure to prevent many of the debacles of the recent past. New fiascoes often engender a spate of legislation, but the regulator remains the one who gets away—he is simply not accountable and does not shoulder the blame. Clearly, a new definition of regulator responsibility is required. Drawing on his years of company board and auditing experience, Bavly analyzes why the average director cannot do his job, and he shows how a complete, but feasible, overhaul of the way company boards function can help solve this problem. Bavly then goes on to explore, as an insider, the profession of accounting and to show why the CPA should be considered an endangered species. Along the way, Bavly examines many of the difficult issues of contemporary accounting: Where is the trend of mammoth accounting organizations leading? Is the addiction to mergers suicidal? How is the accounting profession coping with technology? What is the relationship between the outside CPA and the corporate internal audit division? For each specific flaw in the system, Bavly provides a practical remedy. The general message is the need for constant reassessment and, perhaps, a plea to cut all the agencies of corporate governance back to human proportions.

This biography provides the first comprehensive portrait of the personality and diverse accomplishments of a man who reorganized the Siemens companies, headed the Reichsbahn national railroad for ten years, and served politically as a delegate from a democracy-supporting party. The study shows how he increasingly turned away from party politics, and how his position evolved yet again during the Third Reich, from compliance with the regime to a growing personal alienation.

ceo speech on company anniversary: The Lost History of "Talking to Computers" William Meisel, 2025-03-17 Much science fiction has humans talking to computers, an early example being HAL in the movie 2001 in 1968. That vision motivated many people to attempt making the imagined technology real, including the author, who founded a company developing speech recognition technology in the 1980s. Speech recognition was an early part of Artificial Intelligence, computers doing a task that had previously been exclusive to humans, and proved to be more difficult than early pioneers expected. The Lost History of "Talking to Computers" documents 27 years of those efforts; the source of the history is the author's 309 monthly issues of a newsletter tracking the hundreds of companies trying to make a business out of this challenging technology. Today, we talk to computers frequently on our smartphones (e.g., Apple's Siri or Google Assistant) or to a home

speaker (e.g., Amazon's Alexa) and often when we telephone a customer service number. Most doctors use computer transcription of their notes for Electronic Healthcare Systems. Speech recognition is teaching how to speak a new language and finding specific content in a video file. How did we get here and where will it take us? What can we learn from this history that has implications for the huge investments in more general AI today? Readers will be amazed at how many companies were inspired by this challenge beginning more than three decades ago.
