

fhl tendon transfer cpt

Understanding FHL Tendon Transfer: CPT and Its Applications

FHL tendon transfer CPT refers to a specific surgical procedure that involves the transfer of the flexor hallucis longus (FHL) tendon to restore function in the foot, particularly in cases of tendon dysfunction or injury. This procedure is commonly performed to enhance the ability to push off during walking or running, and it is particularly beneficial for patients suffering from various conditions that impair their mobility. In this article, we will explore the anatomy involved, indications for the procedure, the surgical technique, postoperative care, and the overall impact of FHL tendon transfer on patients' quality of life.

Anatomy of the Flexor Hallucis Longus Tendon

The flexor hallucis longus is a muscle located in the posterior compartment of the leg. It plays a critical role in the movement of the big toe and contributes to various foot functions including:

- Plantarflexion of the ankle
- Inversion of the foot
- Stabilization of the foot during ambulation

The FHL tendon originates from the fibula and runs down to insert at the base of the distal phalanx of the big toe. Its primary function is to flex the big toe and assist in the propulsion phase of walking or running. When this tendon is compromised due to injury or degeneration, it can lead to significant functional impairments.

Indications for FHL Tendon Transfer

FHL tendon transfer is indicated in various situations, including:

1. **Tendon Rupture:** Complete or partial tears of the FHL tendon can lead to a loss of function.
2. **Neurological Conditions:** Conditions like Charcot-Marie-Tooth disease or post-polio syndrome may necessitate tendon transfer to regain muscle function.

3. **Trauma:** Injuries to the foot or ankle that affect the FHL tendon can result in reduced mobility.
4. **Congenital Disorders:** Conditions such as clubfoot may require tendon transfer to improve foot function.
5. **Post-Surgical Complications:** Failures following prior surgeries on the foot or ankle may benefit from this procedure.

Before proceeding with surgery, a thorough evaluation by an orthopedic surgeon is necessary to determine the appropriateness of FHL tendon transfer based on the patient's specific condition.

Surgical Technique for FHL Tendon Transfer

The FHL tendon transfer is typically performed under general anesthesia. The procedure can vary based on the individual patient's needs, but the following steps provide a general overview:

1. Incision and Exposure

A surgical incision is made on the medial aspect of the ankle to expose the FHL tendon. Care is taken to avoid damaging surrounding structures, including nerves and blood vessels.

2. Tendon Harvesting

The FHL tendon is carefully dissected from its surrounding tissue. The surgeon assesses the tendon's integrity and, if necessary, prepares it for transfer.

3. Tendon Transfer

The harvested FHL tendon is then rerouted to the appropriate insertion site, usually at the base of the first metatarsal or another location that will facilitate improved function. The tendon is anchored securely to ensure stability and effectiveness.

4. Closure

Once the tendon transfer is complete, the incision is closed in layers, and sterile dressings are applied. The procedure may also involve the use of internal fixation devices, such as screws or anchors, depending on the surgeon's preference and the patient's anatomy.

Postoperative Care and Rehabilitation

The success of an FHL tendon transfer largely depends on the postoperative rehabilitation process. The following steps are typically included in the recovery plan:

1. Immediate Postoperative Care

- Patients are usually monitored in a recovery area until the anesthesia wears off.
- Pain management is initiated with medications as needed.
- Ankle elevation is advised to reduce swelling.

2. Immobilization

- The foot may be immobilized in a cast or splint for a specified period, often ranging from 2 to 6 weeks, to allow for initial healing of the tendon transfer.

3. Physical Therapy

- After the immobilization period, physical therapy is critical. Therapy often begins with gentle range-of-motion exercises and progresses to strengthening and functional activities.
- Patients typically follow a structured rehabilitation protocol that may last several months, focusing on restoring mobility, strength, and balance.

4. Gradual Return to Activity

- Patients are gradually introduced to weight-bearing activities as tolerated.
- Full return to sports or high-impact activities may take several months, depending on individual healing responses and rehabilitation progress.

Potential Risks and Complications

While FHL tendon transfer is generally safe, as with any surgical procedure, there are risks involved. Potential complications may include:

- Infection at the surgical site
- Weakness or loss of function in the big toe
- Scar tissue formation

- Persistent pain or discomfort
- Failure of the tendon to heal or integrate with the new insertion site

Patients are advised to discuss these risks with their surgeon prior to surgery to ensure a comprehensive understanding of the procedure and its implications.

Impact on Quality of Life

The primary goal of FHL tendon transfer is to enhance the patient's quality of life by restoring mobility and functionality in the foot. Many patients experience significant improvements in their ability to walk, run, and participate in daily activities post-surgery.

Research indicates that:

- A large percentage of patients report satisfaction with the results of the surgery.
- Improvements in functional scores, such as the American Orthopaedic Foot & Ankle Society (AOFAS) scale, are common following rehabilitation.
- The procedure can lead to reduced pain and improved activities of daily living, enhancing overall life satisfaction.

Conclusion

FHL tendon transfer is a compelling surgical option for patients with compromised function of the flexor hallucis longus tendon. Understanding the anatomy, indications, surgical technique, and rehabilitation process is essential for both patients and healthcare professionals. As surgical techniques continue to evolve and improve, the prospects for successful outcomes and enhanced quality of life for patients undergoing this procedure are promising. With proper evaluation, surgical intervention, and dedicated postoperative care, individuals can regain mobility and return to their desired activities with confidence.

Frequently Asked Questions

What is FHL tendon transfer surgery?

FHL tendon transfer surgery is a surgical procedure where the flexor hallucis longus (FHL) tendon is relocated to restore function to the foot or ankle, often used to treat conditions such as drop foot or to improve push-off strength in patients with certain injuries.

What are the common indications for FHL tendon transfer?

Common indications for FHL tendon transfer include drop foot due to peroneal nerve injury, Achilles

tendon rupture, or conditions resulting in weakened toe flexion or ankle stability.

What CPT code is used for FHL tendon transfer?

The CPT code commonly used for FHL tendon transfer is 28300, which refers to tendon transfer, flexor to extensor, foot.

What are the potential risks associated with FHL tendon transfer?

Potential risks associated with FHL tendon transfer include infection, nerve injury, tendon rupture, stiffness, and inadequate functional improvement post-surgery.

How is the recovery process after FHL tendon transfer?

Recovery after FHL tendon transfer typically involves a period of immobilization followed by gradual physical therapy, with full recovery taking several months to regain strength and mobility.

What role does physical therapy play after FHL tendon transfer?

Physical therapy plays a crucial role in rehabilitation after FHL tendon transfer, focusing on restoring range of motion, strength, and functional ability, as well as preventing complications like stiffness or weakness.

fhl tendon transfer cpt: *Orthopaedics for Physician Assistants* Sara D Rynders, Jennifer Hart, 2013-04-12 The first reference of its kind designed specifically for PAs, *Orthopaedics for Physician Assistants* is a comprehensive, portable handbook that helps you master orthopaedic physical examination and history taking, imaging interpretation and diagnosis, and treatment strategies - essential knowledge that directly affects your patient care. Authors Sara Rynders and Jennifer Hart present precisely the diagnostic and procedural information you need with this easy-to-use, PA-focused orthopaedic resource! Learn how to interpret and correlate lab and diagnostic procedures, reach an accurate diagnosis, formulate effective treatment plans, and implement therapeutic strategies. Quickly grasp pertinent information with brief, bulleted text enhanced with clear diagrams and images. Easily follow the guidelines for each procedure thanks to consistent headings in each chapter and a handy outline format. See how to perform 14 key joint injections with online videos demonstrating elbow joint injection, knee joint injection, medial epicondyle injection, subacromial injection, digital block, and more. Access the entire text and illustrations online at www.expertconsult.com.

fhl tendon transfer cpt: Orthopaedics for Physician Assistants E- Book Sara D Rynders, Jennifer Hart, 2021-11-05 Written by PAs for PAs, *Orthopaedics for Physician Assistants*, 2nd Edition, is the first and only orthopaedics text specifically designed for physician assistant practitioners and students. This comprehensive yet portable guide helps you master the essential knowledge that directly affects your patient care. Coauthors and physician assistants Sara Rynders

and Jennifer Hart clearly present everything you need to know to manage orthopaedic issues in either a general practice or orthopaedic practice setting. - Provides precisely the diagnostic and procedural information physician assistants need, covering orthopaedic physical examination and history taking, imaging interpretation and diagnosis, and treatment strategies for orthopaedic problems. - Features brief, bulleted text, consistent headings in each chapter, an easy-to-follow outline format, and clear diagrams and images throughout. - Demonstrates how to perform 14 key joint injections with online videos of elbow joint injection, knee joint injection, medial epicondyle injection, subacromial injection, digital block, and more. - NEW to the 2nd Edition: - ICD-10 codes to facilitate accurate coding and billing - Clinical Alert boxes that highlight key information - Quick-reference guide inside the front cover listing content by disorder name - Concise review of common Orthopedic PANCE/PANRE topics - Streamlined surgery content that focuses on need-to-know material - A clearer, more direct writing style and updated content throughout, reflecting the most current research evidence and national and international guidelines

fhl tendon transfer cpt: *Tendon Repairs and Transfers for the Foot and Ankle, An Issue of Clinics in Podiatric Medicine & Surgery* Christopher Reeves, 2016-01-07 In this issue, articles will include: Tendon transfers for the acute Achilles Tendon rupture and chronic Achilles Tendon pathology, Tendon transfers and salvaging options for Hallux Varus Deformities, Peroneal tendon transfers and rupture repairs, Principles and Biomechanical considerations of tendon transfers, Youngs Tenosuspension and many more!

fhl tendon transfer cpt: *Tendon Transfers In the Foot and Ankle, An Issue of Foot and Ankle Clinics* Chris Chiodo, Eric M. Bluman, 2011-09-28 Principles of Balancing the Foot with Tendon Transfers, Basic Science of Tendon Transfers, Tendon Transfer for Ankle Equinus and Equinovarus, The Bridle Procedure, The Uses of Tendon Transfers to Correct the Cavus Foot and Ankle, Tendon Transfers About the Hallux (Jones, FHB, Hallux Varus), Forefoot Tendon Transfers, Tendon Transfers in Polio, Management of Equinovalgus Deformity, The Management of Spastic Equinovarus Deformity Following Stroke and Head Injury.

fhl tendon transfer cpt: *Tendon Transfers and Treatment Strategies in Foot and Ankle Surgery, An Issue of Foot and Ankle Clinics of North America* Bruce Cohen, 2014-03-28 This issue of Foot and Ankle Clinics will cover all of the most common procedures carried out by foot and ankle surgeons. A general overview at the beginning of the issue will lead into treatment of: flatfoot, cavus foot, hallux claw tow and varus, foot drop, rear instability, Achilles dysfunction, and spastic foot.

There will be also be an article discussing percutaneous techniques.

fhl tendon transfer cpt: Updates in the Management of Acute and Chronic Lesions of the Achilles Tendon, An issue of Foot and Ankle Clinics of North America Phinit Phisitkul, 2019-07-31 This issue of Foot and Ankle Clinics, guest edited by Dr. Phinit Phisitkul, will cover essential topics related to Updates in the Management of Acute and Chronic Lesions of the Achilles Tendon. Under the guidance of long-time series Consulting Editor Dr. Mark Myerson, Dr. Phistikul and his contributing authors will explore topics of interest for practitioners in the field. Articles include, but are not limited to: Anatomical and functional considerations in Achilles tendon lesions; Minimally invasive treatments for acute Achilles tendon ruptures; Open Reconstructive strategies for Chronic Achilles Tendon Ruptures; Maximizing the return to sports after Achilles tendon rupture in athletes; Nonsurgical treatment modalities for Insertional Achilles tendinopathy; Surgical strategies for the treatment of Insertional Achilles Tendinopathy; Minimally invasive and endoscopic treatment of Haglund syndrome; Management of complications related to Achilles tendon surgery; Biologics in the treatment of Achilles tendon pathologies; and Endoscopic reconstruction for Chronic Achilles Tendon Ruptures, among others.

fhl tendon transfer cpt: Treatment of Acute and Chronic Tendon Rupture and Tendinopathy, An Issue of Foot and Ankle Clinics of North America Selene G. Parekh, 2017-11-04 This issue of Foot and Ankle Clinics, edited by Dr. Selene Parekh, will cover Treatment of Acute and Chronic Tendon Rupture and Tendinopathy. Topics discussed in the issue include, but are not limited to: Understanding the Anatomy and biomechanics; Tendonitis & Tendinopathy; Presentation, diagnosis and nonsurgical treatment options; The Missed Achilles Tear; Insertional Tendinopathy of the Achilles; Allograft Reconstruction for Achilles Disease; Using Arthroscopic Techniques for Achilles Pathology; Osteotomies for Achilles pathologies; Surgical treatment of acute ruptures of the peroneals, among others.

fhl tendon transfer cpt: The Achilles Tendon James A. Nunley, 2008-12-10 Disorders of the Achilles tendon are universal, affecting people in a wide range of age groups. Because the Achilles tendon is one of the most powerful musculotendinous structures in the body, the impact of an injury to the Achilles tendon becomes magnified. There is a wide range of disorders or problems that can involve the insertional region, where pathology may rest with bone, tendon, or bursae. A completely different set of pathologic entities resides in the noninsertional region, one of which may include the frustrating degenerative tendinopathy. As our growing population ages but remains physically active longer into life, the incidence of these disorders will continue to increase. I am proud to be given the opportunity to write the foreword to this text, which is intended for foot and ankle surgeons worldwide. Seldom does a book on a single entity become a current concepts review, as this work has. Too often, textbooks are not published for several years after the chapters have been written, making them obsolete upon publication. Not so with this book, which deals with timely topics on the Achilles tendon. Dr. James Nunley has compiled this work in slightly over a year, thus providing the reader with state-of-the-art material. Dr. Nunley had the foresight to create a much needed techniques-oriented book dealing with the complexities of the Achilles tendon. His approach was to develop a comprehensive guide to managing Achilles tendon problems.

fhl tendon transfer cpt: Tendon Transfers of the Hand and Forearm Richard Jay Smith, 1987

fhl tendon transfer cpt: Tendon Transfers to Restore Opposition of the Thumb J.M. Ramselaar, 2012-12-06 In man and some of the apes, the thumb has the function of a contra finger. This function is made possible by a great freedom of movement of the first metacarpal and a highly developed and differentiated thumb musculature. The grasp function of the hand is dependent on the oppositional capacity and adductive power of the thumb, and is severely limited by a paralysis or dysfunction of the intrinsic thumb muscles. Whereas loss of the function of the adductor pollicis can be partially compensated for by the adductive action of the extensor pollicis longus, in paralysis or dysfunction of the radial thenar muscles compensation can only be provided by surgery. Since 1918, many methods of tendon transfer have been described for the restoration of thumb opposition, all of which bring about an improvement of the grasp function, albeit to different degrees. These methods

vary in the selection of the motor, the direction of pull of the tendon, the use of a fulcrum, and the mode of insertion. The highly effective method of Bunnell (1938) is often used as the standard procedure. With this method, the flexor superficialis tendon of the ring finger is looped around the tendon of the flexor carpi ulnaris and passed subcutaneously across the thenar eminence, after which it is fixed on the thumb at the level of the metacarpo-phalangeal joint.

fhl tendon transfer cpt: *Tendon Transfers in the Upper Limb, An Issue of Hand Clinics* Glenn Gaston, 2016-07-15 This issue of Hand Clinics will include articles on tendon transfers in the upper limb such as: Principles of Tendon Transfers, Biomechanics of tendon transfers, Restoration of Shoulder Function, Restoration of Elbow Flexion, Radial Nerve Tendon Transfers, High Median Nerve Tendon Transfers, Low Median Nerve Transfers (Opponensplasty), Ulnar Nerve Tendon Transfers for Grasp (Intrinsics), and many more!

fhl tendon transfer cpt: Tendon Transfer Surgery of the Upper Extremity: A Master Skills Publication , 2012-08-01

fhl tendon transfer cpt: Achilles Tendon Pathology, An Issue of Clinics in Podiatric Medicine and Surgery Paul D. Dayton, 2017-03-06 This issue of Clinics in Podiatric Medicine and Surgery will include articles that focus on achilles tendon pathology and will include: Anatomy and Blood supply; Imaging Indications and Techniques; Mid-substance Tendinopathy Background and Clinical Evaluation; Mid-substance Tendinopathy; Non-Surgical Management; Mid-substance Tendinopathy; Percutaneous Techniques; Mid-substance Tendinopathy; Surgical Management; and a plethora of additional articles on this exciting topic.

fhl tendon transfer cpt: Tendon transfer for irreparable cuff tear Philippe Valenti, 2010-11-11 Treatment of symptomatic irreparable cuff tear is rare, but represents a difficult challenge for the surgeon. Tendon transfer from periscapular muscles group is a therapeutic option. Many tendon transfers are reported as latissimus dorsi, teres major, split of anterior deltoid and pectoralis major. The goal of this book is to remind the biomechanical and anatomical basis of these tendon transfers and to report tips and tricks and results of these techniques. A treatment algorithm is proposed in patients who have both pain and weakness or have loss of active forward elevation or external rotation. Moreover, tendon transfer can be combined with reverse shoulder prosthesis in patients with an unstable gleno humeral arthritis.
