hesi pediatrics 2022: *Pediatric Nonadherence* Victor Fornari, Ida Dancyger, Peter Silver, 2024-06-18 Nonadherence to pediatric recommendations is a pervasive challenge to the growth, development, and wellbeing of children. Nearly half of all youth and their parents suffer the consequences of misunderstanding, forgetting, ignoring or refusing professional medical advice regarding children. Addressing this widespread dilemma, this unique and comprehensive title explores a variety of different pediatric problems that impact children, adolescents and their families. Clinical case vignettes are provided to highlight particular considerations, and a description of the most up-to-date strategies to solve the dilemma of nonadherence to pediatric care is provided. Indeed, technology is emphasized as an important and innovative means of tracking, interfacing and gathering individual data and facilitating improved pediatric adherence. No one intervention strategy can be applied to solve nonadherence of pediatric patients. Research studies

have concluded that successful efforts to enhance adherence rely on a number of important elements. First and foremost is nurturing a trusting relationship between the patient, the family and the clinician, which strengthens the therapeutic alliance. Following that is making sure that the patient and family fully understand the nature of the illness and the recommendations. Effective and clear communication is critical between the health professionals, the patient and the family. When the health professional understands who the patient and the family are on a deeper level, then adherence may be improved. It is imperative that the clinicians take into account the individual patient and families' cultural, social and community context, as well as their beliefs and support systems. An atmosphere of shared collaboration and mutual respect will improve open communication and the promotion of adherence and positive outcomes. An important thread throughout each chapter is the impact of health care disparities, diversity and equity. The contributors to *Pediatric Nonadherence* represent a wide range of nationally and internationally recognized experts in their area of pediatric sub-specialization and practice. A major contribution to the clinical literature, this timely title will be of great interest to pediatricians, family practitioners, medical students, residents, fellows, physician assistants, and nurse practitioners.

hesi pediatrics 2022: Vaccine Hesitancy Curriculum Amanda J. Chase, Michelle L. Demory, Marc M. Kesselman, 2025-06-16 Vaccination is considered one of humanity's most transformative medical breakthroughs, with its origins tracing back to Edward Jenner's groundbreaking smallpox vaccine in the late 18th century. Though early skepticism of vaccines was formidable, rigorous

scientific investigation and countless documented successes established vaccination as a cornerstone of modern medicine. For generations, vaccination was considered one of the surest ways to prevent death and suffering from infectious diseases, fundamentally reshaping global public health outcomes. However, advances in social networking and the influence of an anti-vaccination movement have reignited vaccine hesitancy on a scale not seen since the pre-modern era. Empowering healthcare providers with the skills to engage in meaningful dialogue with patients and the community about vaccines is paramount to addressing vaccine hesitancy and rebuilding public trust in vaccination programs. This comprehensive book first lays a foundation for understanding vaccine hesitancy by exploring the historical sources of mistrust in vaccines and science. Subsequent chapters highlight evidence-based approaches to cultivate communication skills and foster meaningful dialogue in patient interactions, while emphasizing empathetic practice and self-reflection in health professions trainees. Beyond theoretical foundations, it provides practical tools and strategies for addressing the most challenging aspects of vaccine communication. When these communication principles are thoughtfully applied in clinical settings, they become powerful tools for combating misinformation, dismantling deeply held misconceptions, and nurturing patient trust.

hesi pediatrics 2022: The Changing Focus of Regulatory Frameworks Around the Globe and the Opportunities for Harmonization Violeta Stoyanova-Beninska, Armando Magrelli, Daniel O'Connor, 2025-08-25 Regulation related to the development, registration and monitoring of medicinal products has developed at different paces in regions of the world, but the most quoted trigger for 'modern' drug regulation is the thalidomide tragedy of the mid-20th century. In the past decades a lot of progress has been made in the application and evolution of regulatory legislative procedures for the benefit of patients and public health but also in driving and enabling innovation. Medicines development is a global endeavor and exchange of experience and knowledge between regulatory agencies working under different jurisdictions is not only necessary but seen increasingly as essential. There are several factors playing a role in this process: • Patients are increasingly well informed about their disease, existing treatments, and novel developments on the horizon, and share information with others across regions. • Scientific progress is facing a rapid development with impressive achievements in medicine, pharmacology, basic science, and technical disciplines. With this we also face several novel challenges inherent with the possibilities that technology can provide (e.g. whole genome sequencing, AI, etc.). • Regulatory bodies are facing new challenges with decisions to be made faster for the sake of not delaying the availability and access to newly developed treatments. The COVID-19 crisis has only reiterated the need for collaboration, coherence, and solidarity on a global scale. With this in mind, we as guest editors are opening a research topic which is intended to invite experts from around the globe to contribute their views on the regulation of medicines today and in the future. More specifically we expect manuscripts related to the following topics: • Summary of the key aspects of the 3 main regulatory frameworks globally - USA, Europe and Japan commonalities and differences Future changes to EU legislation - case study of drivers for change • Global trends in regulatory science that impact legislation, drug development and patient access • The importance of regulatory collaboration and harmonization and the role of not for profit organizations • Emerging regulatory frameworks - Africa, Latin America and the ROW • Reliance regulation - pros and cons - is this the direction of travel? • Novel regulatory procedures - case studies of innovation in regulatory practice • Future proofing the regulatory framework and the role of horizon scanning • Scientific advice and other regulatory support tools • Clinical trials, centralized versus decentralized? • Digital revolution - impact of AI and ML • Drug device combinations • Specific regulatory pathways for innovative medicines • Possibilities for regulatory convergence Type of articles expected (but not limited to) are: • Original articles, • Reviews
