daisy template pdf: [Toward a Living Architecture?](#) Christina Cogdell, 2019-01-01 A bold and unprecedented look at a cutting-edge movement in architecture *Toward a Living Architecture?* is the first book-length critique of the emerging field of generative architecture and its nexus with computation, biology, and complexity. Starting from the assertion that we should take generative architects' rhetoric of biology and sustainability seriously, Christina Cogdell examines their claims from the standpoints of the sciences they draw on—complex systems theory, evolutionary theory, genetics and epigenetics, and synthetic biology. She reveals significant disconnects while also pointing to approaches and projects with significant potential for further development. Arguing that architectural design today often only masquerades as sustainable, Cogdell demonstrates how the language of some cutting-edge practitioners and educators can mislead students and clients into thinking they are getting something biological when they are not. In a narrative that moves from the computational toward the biological and from current practice to visionary futures, Cogdell uses life-cycle analysis as a baseline for parsing the material, energetic, and pollution differences between different digital and biological design and construction approaches. Contrary to green-tech sustainability advocates, she questions whether quartzite-based silicon technologies and their reliance on rare earth metals as currently designed are sustainable for much longer, challenging common projections of a computationally designed and manufactured future. Moreover, in critiquing contemporary architecture and science from a historical vantage point, she reveals the similarities between eugenic design of the 1930s and the aims of some generative architects and engineering synthetic biologists today. Each chapter addresses a current architectural school or program while also exploring a distinct aspect of the corresponding scientific language, theory, or practice. No

He counters the symbolic neglect of functionalist design with a brilliant account of poetic and graphic techniques developed to materialize ambience. Carter describes a practice of sense-making and form-making that embodies fundamental gestures of welcome, arrangement, and exchange in the built setting.

daisy template pdf: Translations, an autoethnography Paul Carter, 2021-12-21 Translations is a personal history written at the intersection of colonial anthropology, creative practice and migrant ethnography. Renowned postcolonial scholar, public artist and radio maker, UK-born Paul Carter documents and discusses a prodigiously varied and original trajectory of writing, sound

installation and public space dramaturgy produced in Australia to present the phenomenon of contemporary migration in an entirely new light. Migrant space-time, Carter argues, is not linear, but turbulent, vortical and opportunistic. Before-and-after narratives fail to capture the work of self-becoming and serve merely to perpetuate colonialist fantasies. The 'mirror state' relationship between England and Australia, its structurally symmetrical histories of land theft and internal colonisation, repress the appearance of new subjects and subject relations. Reflecting on collaborations with Aboriginal artists, Carter argues for a new definition of the stranger-host relationship predicated on recognition of Aboriginal sovereignty. Carter calls the creative practice that breaks the cycle of repeated invasion 'dirty art'. *Translations* is a passionately eloquent argument for reframing borders as crossing-places: framing less murderous exchange rates, symbolic literacy, creative courage and, above all, the emergence of a resilient migrant poetics will be essential.
