Hall asserts that William Wordsworth and Ralph Waldo Emerson were transatlantic literary figures who were both influenced by the English naturalist Gilbert White. In Part 1, Hall examines evidence that as Romantic naturalists interested in meteorology, Wordsworth and Emerson engaged in proto-environmental activity that drew attention to the potential consequences of the locomotive's incursion into Windermere and Concord. In Part 2, Hall suggests that Wordsworth and Emerson shaped the early environmental movement through their work as poets-turned-naturalists, arguing that Wordsworth influenced Octavia Hill's contribution to the founding of the United Kingdom's National Trust in 1895, while Emerson inspired John Muir to spearhead the United States' National Parks movement in 1890. Hall's book traces the connection from White as a naturalist-turned-poet to Muir as the quintessential early environmental activist who camped in Yosemite with President Theodore Roosevelt. Throughout, Hall raises concerns about the growth of industrialization to make a persuasive case for literature's importance to the rise of environmentalism.

Kallenbach, 2013-04-17 The year 1998 marked the 50th anniversary of the invention of the neutron monitor, a key research tool in the field of space physics and solar-terrestrial relations. In honor of this occasion a workshop entitled 'Cosmic Rays and Earth' was organized to review the detection of cosmic rays at the surface and in the lower atmosphere of Earth, including the effect that this radiation has on the terrestrial environment. A special focus was the role of neutron monitors in the investigation of this radiation, on the science enabled by the unique dataset of the worldwide network of neutron monitors, and on continuing opportunities to use these data to solve outstanding problems. This book is the principal product of that workshop, integrating the contributions of all participants. Following a general summary of the workshop prepared by the editors, the volume leads off with a keynote article by Professor John Simpson describing his invention of the neutron monitor in 1948 and the early scientific discoveries made with this instrument.

dorman interchange: Soviet Consumer Culture in the Brezhnev Era Natalya Chernyshova, 2013-06-26 After decades of turmoil and trauma, the Brezhnev era brought stability and an unprecedented rise in living standards to the Soviet Union, enabling ordinary people to enjoy modern consumer goods on an entirely new scale. This book analyses the politics and economics of the state's efforts to improve living standards, and shows how mass consumption was often used as an instrument of legitimacy, ideology and modernization. However, the resulting consumer revolution brought its own problems for the socialist regime. Rising well-being and the resulting ethos of consumption altered citizens' relationship with the state and had profound consequences for the communist project. The book uses a wealth of sources to explore the challenge that consumer modernity was posing to Soviet 'mature socialism' between the mid-1960s and the early 1980s. It combines analysis of economic policy and public debates on consumerism with the stories of ordinary people and their attitudes to fashion, Western goods and the home. The book contests the notion that Soviet consumers were merely passive, abused, eternally queuing victims and that the Brezhnev era was a period of 'stagnation', arguing instead that personal consumption provided the incentive and the space for individuals to connect and interact with society and the regime even before perestroika. This book offers a lively account of Soviet society and everyday life during a period which is rapidly becoming a new frontier of historical research.
