simple modern rectangular house plans: *Old Buildings, New Forms* Francoise Bollack, 2013-11-12 It is clear that working with historic structures is both more environmentally sustainable and cost effective than new architecture and construction—and many believe that the best design occurs at the intersection of old and new. Françoise Astorg Bollack presents 28 examples gathered in the United States and throughout Europe and the Middle East. Some are well known—Mass MOCA, Market Santa Caterina in Barcelona, Neues Museum in Berlin—and others are almost anonymous. But all demonstrate a unique and appropriate solution to the problem of adapting historic structures to contemporary uses. This survey of contemporary additions to older buildings is an essential addition to the architectural literature. “I have always loved old buildings. An old building is not an obstacle but instead a foundation for continued action. Designing with them is an exhilarating enterprise; adding to them, grafting, inserting, knitting new pieces into the existing built fabric is endlessly stimulating.” —Françoise Astorg Bollack

simple modern rectangular house plans: *Morgan Park* Arnold Robert Alanen, From 1915 to 1971 the large U.S. Steel plant was a major part of Duluth's landscape and life. Just as important was Morgan Park—an innovatively planned and close-knit community constructed for the plant's employees and their families. In this new book Arnold R. Alanen brings to life Morgan Park, the formerly company-controlled town that now stands as a city neighborhood, and the U.S. Steel plant for which it was built. Planned by renowned landscape architects, architects, and engineers, and provided with schools, churches, and recreational and medical services by U.S. Steel, Morgan Park is an iconic example—like Lowell, Massachusetts, and Pullman, Illinois—of a twentieth-century company town, as well as a window into northeastern Minnesota's industrial roots. Starting with the intense political debates that preceded U.S. Steel's decision to build a plant in Duluth, Morgan Park follows the town and its residents through the boom years to the closing of the outmoded facility—an event that foreshadowed industrial shutdowns elsewhere in the United States—and up to today, as current residents work to preserve the community's historic character. Through compelling archival and contemporary photographs and vibrant stories of a community built of concrete and strong as steel, Alanen shows the impact both the plant and Morgan Park have had on life in Duluth. Arnold R. Alanen is professor of landscape architecture at the University of Wisconsin-Madison. His previous books include *Main Street Ready-Made: The New Deal Community of Greendale, Wisconsin* and *Preserving Cultural Landscapes in America*.
