w b health: *The Politics of Healthcare Reform in Turkey* Volkan Yilmaz, 2017-06-21 This book explores the transformation in the healthcare system in Turkey since 2003, which has been portrayed as a benchmark for building universal healthcare systems in emerging market economies. Focussing on healthcare politics in an under-researched developing country context, it fills a significant lacuna in existing scholarship. This study answers these questions: What were the political dynamics that enabled the introduction of healthcare reform in Turkey? What political conflicts did the reform generate? How and to whose benefit have these conflicts been resolved? Drawing on qualitative interviews with a diverse set of actors, Yilmaz explores the actors' subjective interpretations of the reform, the discourses and strategies they used to influence the reform, and the changing healthcare politics scene. He demonstrates that the reform has been a complex political process within which actors negotiated whether and to what extent healthcare remains a

citizenship right or a commodity. This book will appeal to students and scholars of social policy, politics, health policy, public health and sociology.

w b health: Public Sociologies Reader Judith Blau, Keri E. Iyall Smith, 2006-07-13 At an earlier time, sociologists C. Wright Mills, W. E. Du Bois, and Jane Addams loudly protested injustices and inequities in American society, provided critiques and analyses of systems of oppression, and challenged sociologists to be responsible critics and constructive commentators. These giants of American sociology would have applauded the 2004 meetings of the American Sociological Association. The theme of the meetings, Public Sociology, presided over by President Michael Burawoy, sparked lively debate and continues to be a spur for research and theory, and a focal point of ongoing discussions about what sociology is and should be. This volume advances these discussions and debates, and proposes how they can be further sharpened and developed. Some authors in this volume clarify the distinctive roles that Public Sociologists can play in the discipline, in the classroom, and in larger society. Others provide critical analyses, focusing, for example, on aspects of American society and institutions, global corporate actors, sweatshop practices, international neoliberal organizations, migration policies, and U.S. environmental policies. Others advance new ways of thinking about global interdependencies that include indigenous groups, peasants, as well as societies in industrialized and developing states, and international organizations. Still others propose visions of transformative processes and practices that are

progressively affirmative, even activist -- in the spirit of A Better World is Possible!! This volume provides an overview of some of the major debates in sociology today and places emphasis on the importance of human rights in the One (globalized) World we live in today. Authors engage these debates with spirited enthusiasm and write exceptionally clearly about those topics that may be new to American readers.

w b health: Pakistan International Monetary Fund. Middle East and Central Asia Dept., 2019-07-08 Pakistan's economy is at a critical juncture. Misaligned economic policies, including large fiscal deficits, loose monetary policy, and defense of an overvalued exchange rate, fueled consumption and short-term growth in recent years, but steadily eroded macroeconomic buffers, increased external and public debt, and depleted international reserves. Structural weaknesses remained largely unaddressed, including a chronically weak tax administration, a difficult business environment, inefficient and loss making SOEs, and low labor productivity amid a large informal economy. Without urgent policy action, economic and financial stability could be at risk, and growth prospects will be insufficient to meet the needs of a rapidly growing population.

There has been an effort to include the major categories of unconventional materials which can potentially be upgraded to provide the ruminant with needed nutrients, but certainly some have been missed. It is hoped that this treatise will prove to be a valuable tool for workers involved in improving the utilization of residues and waste products for animals.

Arrangement and Request for Modification of Performance Criteria (PCs). The recovery has proceeded broadly as expected in the Third Review, notwithstanding elevated socio-political tensions and a further increase in oil prices. Growth accelerated to 2.8 percent in the second quarter driven by agriculture and tourism. The authorities met all Quantitative PCs and implemented two out of the three Structural Benchmarks due for the Fourth Review, notably the competitive central bank foreign exchange auctions. The IMF staff supports the authorities' request for completion of the Fourth Review under the EFF arrangement.

w b health: The Africa Multi-country AIDS Program, 2000-2006 , 2007-01-01 This study documents the results to which the World Bank's Multi-Country AIDS Program (MAP) financing in Africa has contributed over the last five years (What has the MAP achieved?). It uses extensive and detailed data from surveys and national HIV and AIDS programs from 30 MAP countries that are not usually publicly available or captured in routine World Bank reporting systems. It introduces a new Results Scorecard and Framework for better measuring and reporting on results of Bank-financed HIV/AIDS programs in Africa in the future. The book shows that the MAP has dramatically increased access to HIV prevention, care and treatment across Africa. MAP funding has supported children orphaned by AIDS, prevented mother-to-child transmission, helped countries build capacity for scaled up, more effective national responses to HIV and AIDS, including providing treatment. Regional programs are addressing cross-border issues and countries are sharing knowledge and experiences. A unique feature of the MAP is its emphasis on channeling money to communities, grass-roots initiatives, civil-society organizations and NGOs; [ten /fifteen] personal stories from people and groups in Uganda, Ethiopia and Rwanda offer powerful examples of how the MAP has improved health and lives, reduced stigma, and given new hope to people infected and affected by HIV across the continent.
