[Health on Delivery](#) examines this introduction of state-provided antiretroviral therapy from an ethnographic perspective. Moving from World Health Organization boardrooms in Geneva to clinics held under trees in rural Malawi, it studies the patients, healthcare providers, and policy-makers involved, considering how the rollout has impacted their lives and professions. In doing so, it examines both the challenges and successes of an ambitious attempt to provide universal HIV treatment with limited money, infrastructure, and human resources. As well as an important case study, the book also offers an analytic framework to address the processes by which global policy is made and implemented. Engagingly written, [Health on Delivery](#) will be interesting reading for students and scholars of both anthropology and public health, as well as related disciplines such as geography, international politics and world development. It will also appeal to the general reader interested in global health policies and world development.
