the martian pdf: Terraforming Mars Martin Beech, Joseph Seckbach, Richard Gordon,
2021-11-18 TERRAFORMING MARS This book provides a thorough scientific review of how Mars
might eventually be colonized, industrialized, and transformed into a world better suited to human
habitation. The idea of terraforming Mars has, in recent times, become a topic of intense scientific
interest and great public debate. Stimulated in part by the contemporary imperative to begin
geoengineering Earth, as a means to combat global climate change, the terraforming of Mars will
work to make its presently hostile environment more suitable to life—especially human life.
Geoengineering and terraforming, at their core, have the same goal—that is to enhance (or revive)
the ability of a specific environment to support human life, society, and industry. The chapters in this
text, written by experts in their respective fields, are accordingly in resonance with the important,
and ongoing discussions concerning the human stewardship of global climate systems. In this sense,
the text is both timely and relevant and will cover issues relating to topics that will only grow in their
relevance in future decades. The notion of terraforming Mars is not a new one, as such, and it has
long played as the background narrative in many science fiction novels. This book, however, deals
exclusively with what is physically possible, and what might conceivably be put into actual practice
within the next several human generations. Audience Researchers in planetary science, astronomy,
astrobiology, space engineering, architecture, ethics, as well as members of the space industry.
