webmr: Applications of Immersive Technology in Architecture, Engineering and Construction
Abhinesh Prabhakaran, Abdul-Majeed Mahamadu, Colin A. Booth, Patrick Manu, 2025-06-27 This edited book addresses a gap in literature by advancing current understandings of the applications of immersive technology within the architecture, engineering and construction (AEC) sector. Globally, the architecture, engineering and construction (AEC) sector makes an enormous contribution to the socio-economic development of nations, which is primarily evidenced by its creation/provision of the built environment. The sector has, however, often been criticised for inefficiencies, waste and diverse forms of adverse impacts that are associated with the lifecycle of the provision of built assets – design, construction, operations and maintenance and end-of-life phases. Over the years, the inefficiencies, waste and adverse impacts have often been a catalyst for calls and initiatives to transform the AEC sector. The advent of the fourth industrial revolution (commonly referred to as, 'Industry 4.0'), which entails the automation and digitalisation of production, presents opportunities to leverage emerging technologies to improve the image and productivity of the sector. Prominent among the emerging technologies in the Industry 4.0 era is that of immersive technology, which includes virtual reality, mixed reality and augmented reality. The capability of immersive technology to deliver beneficial impacts for multiple construction sector stakeholders throughout the construction lifecycle has been acknowledged within the industry and this continues to stimulate

interest amongst practitioners, policymakers and researchers. Despite this phenomenon, at present there is no dedicated compendium of research-informed text that focusses on the multifaceted applications of immersive technology throughout the lifecycle of the provision of built assets right from concept design to end-of-life. This book thus addresses this gap in literature by advancing current understanding of the applications of immersive technology within the AEC industry. Readers will understand how the technologies are applied, the resulting array of impacts including benefits, drawbacks, challenges and future directions for applications, research and development.

webmr: *Positive Action in Action* Robert Moore, 2018-12-20 First published in 1997, this volume describes very clearly the various government policies to promote equal opportunity and the context of urban policy in which they have to be implemented. Robert Moore's important study addresses the key issue of equal opportunities through a case study of events when a change in government policy appeared to hold out the prospect of new jobs for a highly deprived inner city area. It is a model for all social research of this kind. The result is a very detailed and objective analysis of the problem of implementing equal opportunity policies in practice.

Das Verstehen beim Simultandolmetschen in die B-Sprache bildet den Ausgangspunkt, und es fragt sich, wie dieses zu messen ist. Mit dem vorliegenden Buch wird erstmalig in der Dolmetschforschung ein eigenständiger epistemologischer Ansatz entwickelt, der vom Dolmetschen selbst ausgeht. Im dargestellten Forschungsprozeß emergiert eine Alternative zur experimentellen Konferenzdolmetschforschung. Dabei werden Brücken geschlagen zu sozialen Akteur/Innen und zur Systemrelativität von Wissen ... und „erst am Ende weiß man, auf welche Fragen eine Studie eine Antwort zu geben vermag“ (Manfred Lueger 2000).
