alice schlein: Crafting Textiles in the Digital Age Nithikul Nimkulrat, Faith Kane, Kerry Walton, 2016-09-08 In an era of increasingly available digital resources, many textile designers and makers find themselves at an interesting juncture between traditional craft processes and newer digital technologies. Highly specialized craft/design practitioners may now elect to make use of digital processes in their work, but often choose not to abandon craft skills fundamental to their practice, and aim to balance the complex connection between craft and digital processes. The essays collected here consider this transition from the viewpoint of aesthetic opportunity arising in the textile designer's hands-on experimentation with material and digital technologies available in the present. Craft provides the foundations for thinking within the design and production of textiles, and as such may provide some clues in the transition to creative and thoughtful use of current and future digital technologies. Within the framework of current challenges relating to sustainable development, globalization, and economic constraints it is important to interrogate and question how we might go about using established and emerging technologies in textiles in a positive manner.

alice schlein: The Fabric of Civilization Virginia Postrel, 2020-11-10 From Neanderthal string to 3D knitting, an “expansive” global history that highlights “how textiles truly changed the world” (Wall Street Journal) The story of humanity is the story of textiles—as old as civilization itself. Since the first thread was spun, the need for textiles has driven technology, business, politics, and culture. In *The Fabric of Civilization*, Virginia Postrel synthesizes groundbreaking research from archaeology, economics, and science to reveal a surprising history. From Minoans exporting wool colored with precious purple dye to Egypt, to Romans arrayed in costly Chinese silk, the cloth trade paved the crossroads of the ancient world. Textiles funded the Renaissance and the Mughal Empire; they gave us banks and bookkeeping, Michelangelo's *David* and the Taj Mahal. The cloth business spread the alphabet and arithmetic, propelled chemical research, and taught people to think in binary code. Assiduously researched and deftly narrated, *The Fabric of Civilization* tells the story of the world's most influential commodity.
