sharknet landmark: Entertaining Entrepreneurs Daniel Horowitz, 2020-09-29 The Great Recession threatened the well-being of tens of millions of Americans, dramatically weakened the working class, hollowed out the middle class, and strengthened the position of the very wealthy. Against this backdrop, the hit reality show Shark Tank premiered in 2009. Featuring ambitious entrepreneurs chasing support from celebrity investors, the show offered a version of the American Dream that still seemed possible to many, where a bright idea and a well-honed pitch could lift a bootstrap business to new heights of success. More than a decade later, Shark Tank still airs regularly on multiple networks, and its formula has sparked imitators everywhere, from elite universities to elementary school classrooms. In *Entertaining Entrepreneurs*, Daniel Horowitz shows how Shark Tank's version of entrepreneurship disguises and distorts the opportunities and traps of capitalism. Digging into today's cult of the entrepreneur, Horowitz charts its rise from the rubble of economic crisis and its spread as a mainstay of American culture, and he explores its flawed view of

what it really takes to succeed in business. Horowitz offers more than a look at one television phenomenon. He is the perfect guide to the portrayal of entrepreneurship in business school courses, pitch competitions, popular how-to books, and scholarly works, as well as the views of real-world venture capitalists.

sharknet landmark: Sharks in the Arts Vivienne Westbrook, Shaun Collin, Dean Crawford, Mark Nicholls, 2018-05-11 This book is the most thorough exploration to date of the many ways in which a wild creature has been absorbed, reimagined and represented across the ages in all of the major art forms. The authors consider not only how the identity of sharks in the natural environment became incorporated into a cultural environment but also how sharks came to be considered the most feared creatures in the open oceans as a consequence of this incorporation. Yet sharks are especially important in helping to maintain a balance that is essential to the health of the oceans. The book begins with a treatment of the three sharks at the top of global shark-attack files from scientific, economic and environmental perspectives. Subsequent chapters engage with cultural representations of sharks in poetry, drama, art, novels, screenplay adaptations and films. Through an exploration of the ways in which sharks have been represented in human culture through the centuries, this book alerts the global community to the importance of sharks as a common cultural heritage. It aims to change perceptions of sharks so that they can become more revered than feared. The authors of this book argue that an increased understanding of sharks should lead to the development of better strategies for shark and human interactions. This book will be of great interest to researchers and students of the Environmental Humanities, Cultural History and the Arts. It is also excellent supplementary reading for courses in Zoology and Marine Science.
